Day-3

Peripheral Troubleshooting Theory

-Common issues and solutions of peripherals.
-Thourbleshoot a non-working printer.

Q 1 :-List 5 common issues users face with USB keyboards or mice on laptops, and write one possible solution for each.

Ans-**5 Common Problems with USB Keyboards and Mice on Laptops**

No.	Common issue	Possible solution
1.	Device not detected: The laptop does not recognize the keyboard or mouse.	Unplug the USB device and connect it again to another USB port.
2.	Mouse not moving: The mouse pointer does not move on the screen.	Clean the mouse sensor and check the USB connection.
3.	Keyboard keys not working: Some keys do not type properly.	Clean the keyboard and reconnect it to the laptop.
4.	Device disconnects repeatedly: The keyboard or mouse stops working again and again.	Try another USB port or check the USB cable for damage.
5.	Slow response: The mouse or keyboard responds slowly.	Restart the laptop and update the USB device drivers.

Conclusion

USB keyboards and mice make using a laptop easier. Most common problems can be solved by reconnecting the device, cleaning it, checking the USB port or updating drivers.

Q 2 :- Simulate a troubleshooting flow: Your Bluetooth headphones are not connecting to your phone. Write the exact step-by-step actions you would take to diagnose and fix the issue, mentioning any settings or indicators you would check.

Ans-**Troubleshooting: Bluetooth Headphones Not Connecting to a Phone**

Problem: My Bluetooth headphones are not connecting to my mobile phone.

Solution: I would follow these step-by-step actions to find and fix the problem.

Step-by-step troubleshooting.

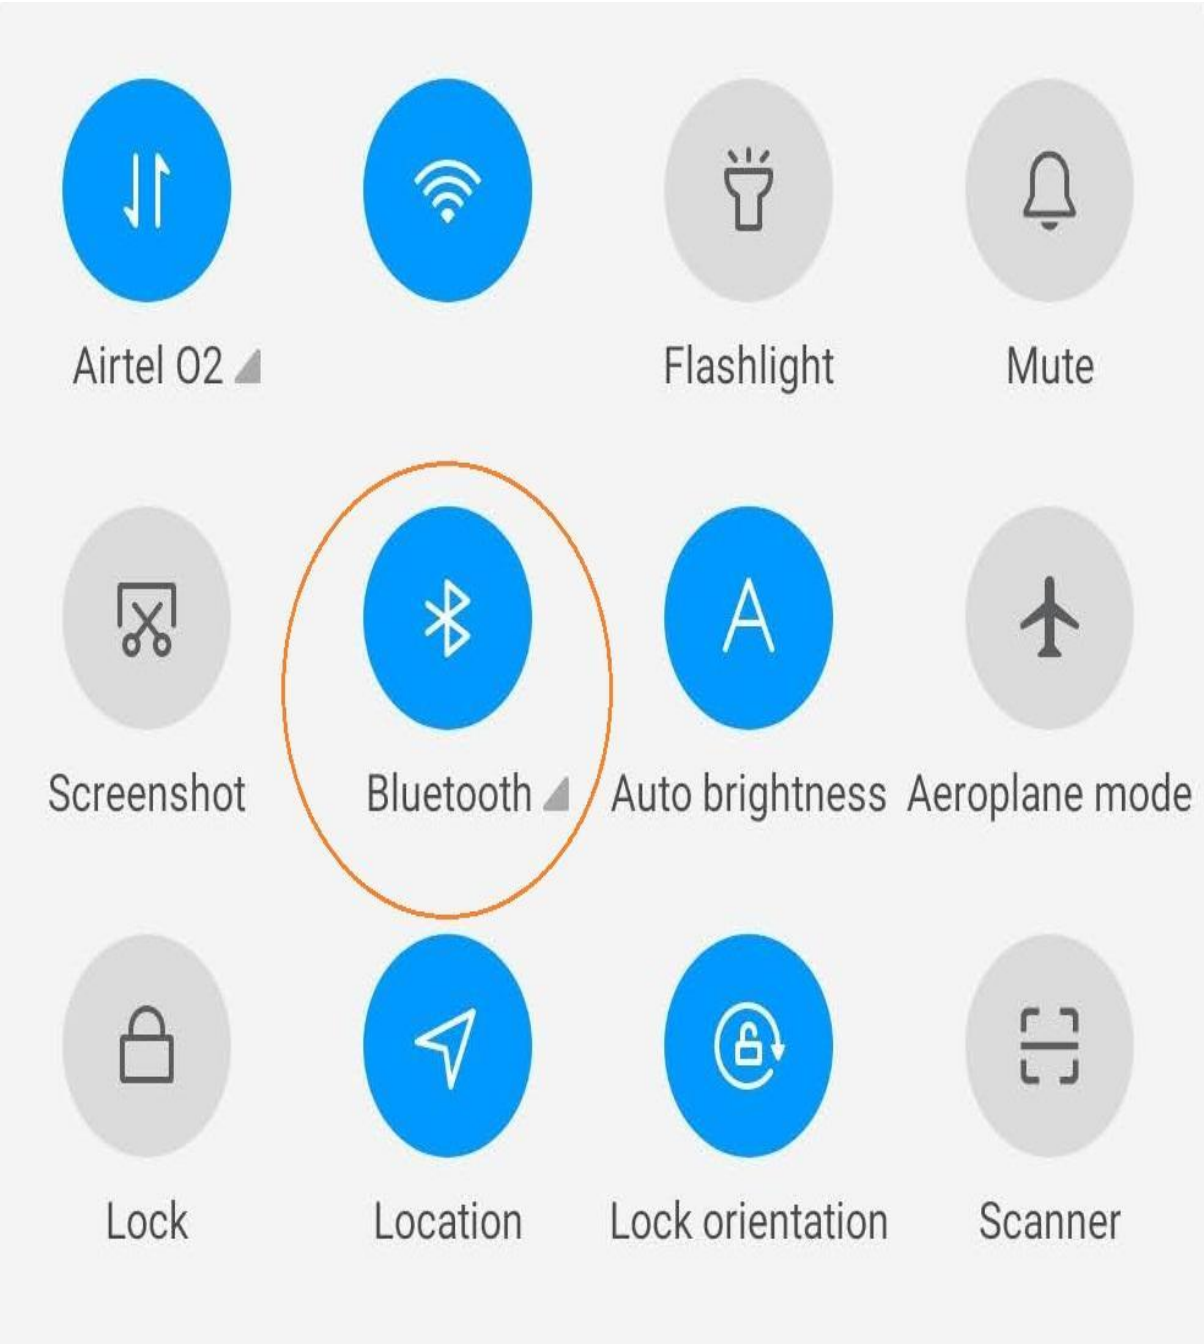

Step 1: Check the headphones

- **Make sure the headphones are switched ON.**
- **Check the power indicator light.**
- **Charge them if the battery is low.**

Step 2: Turn ON Bluetooth

- **Open phone Settings.**
- **Select Bluetooth.**
- **Make sure Bluetooth is switched ON.**

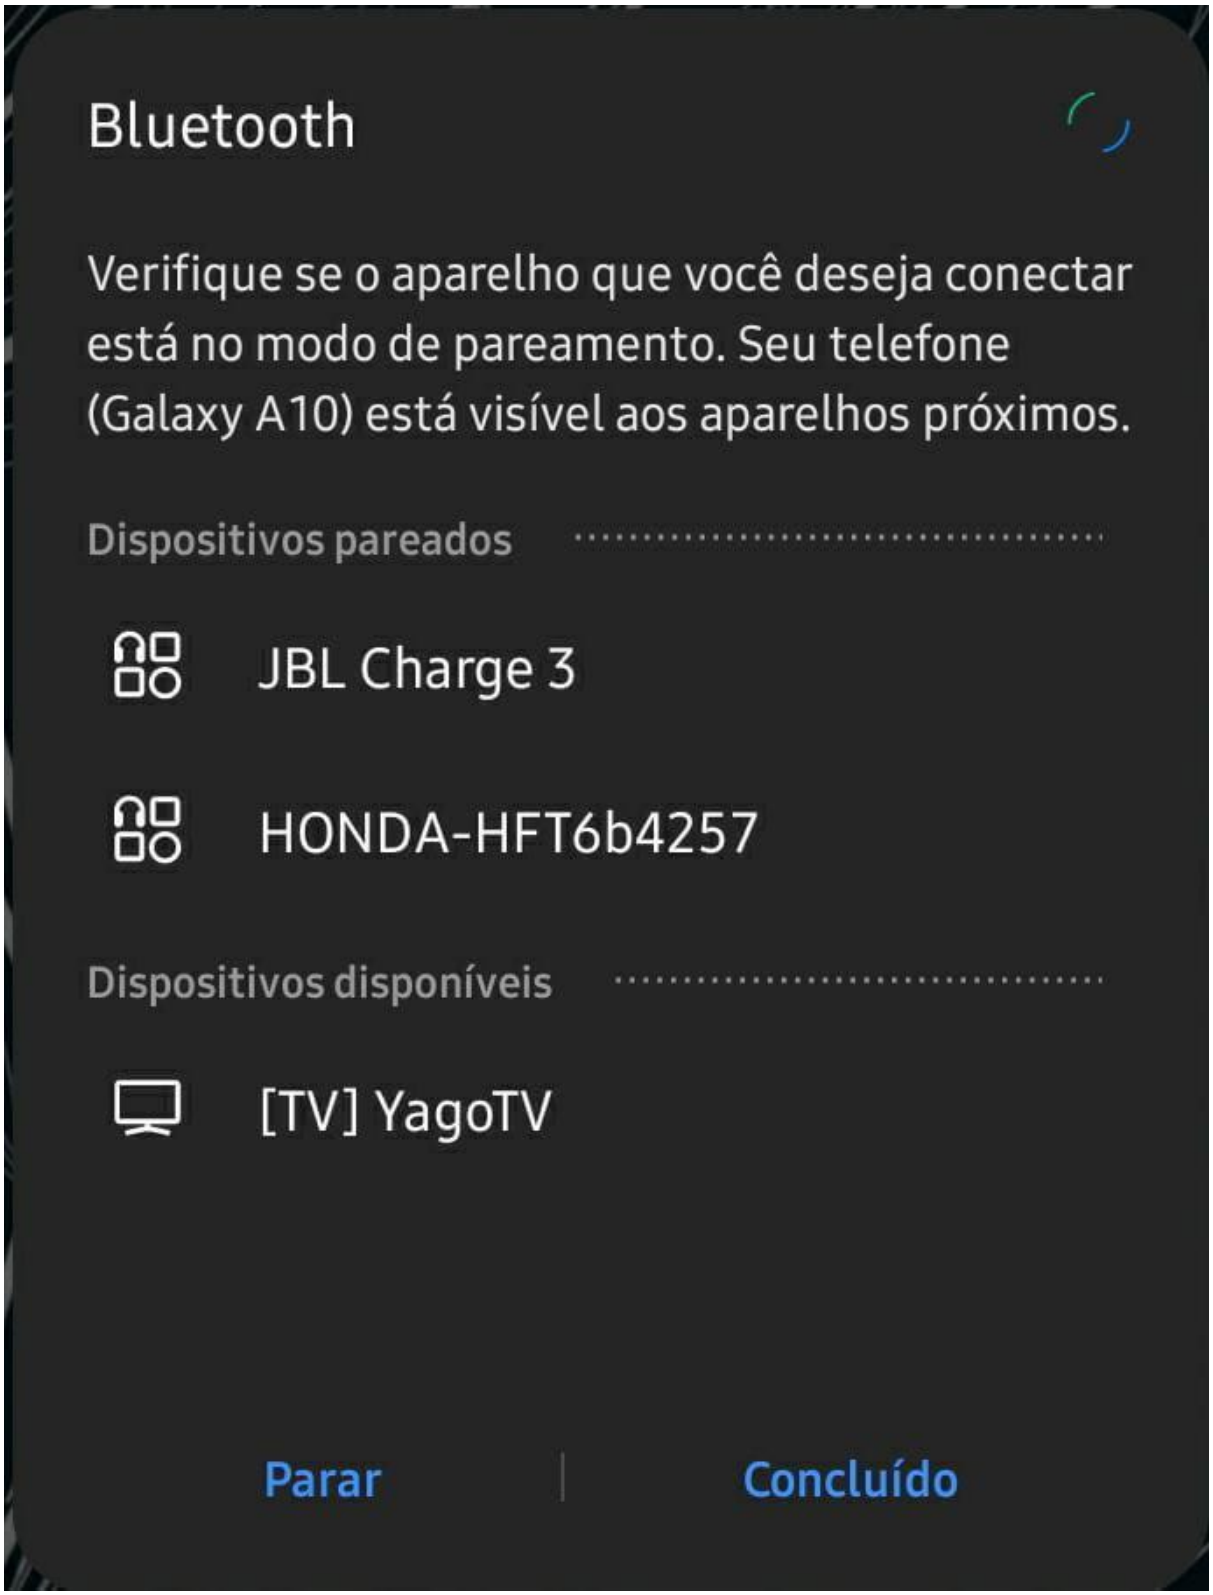

Step 3: Enable pairing mode

- **Press and hold the Bluetooth or power button on the headphones.**
- **Wait for the indicator light to flash.**
- **This means the headphones are ready to connect.**

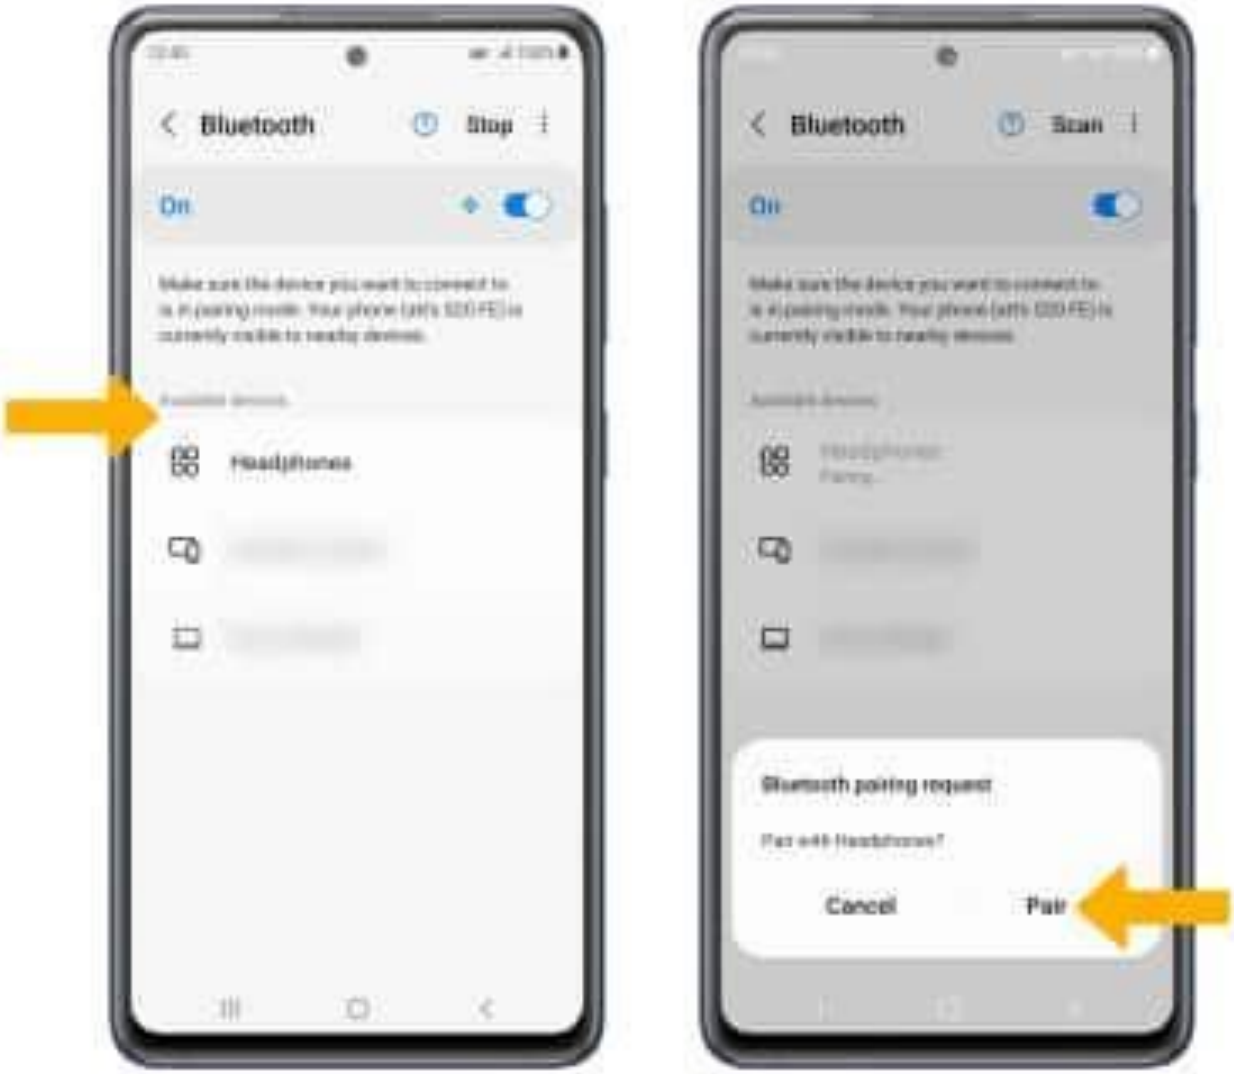

- **Step 4: Search for the headphones**

- **Open Bluetooth settings.**
- **Tap Pair new device or Scan.**
- **Wait for the headphone name to appear.**

Step 5: Connect the headphones

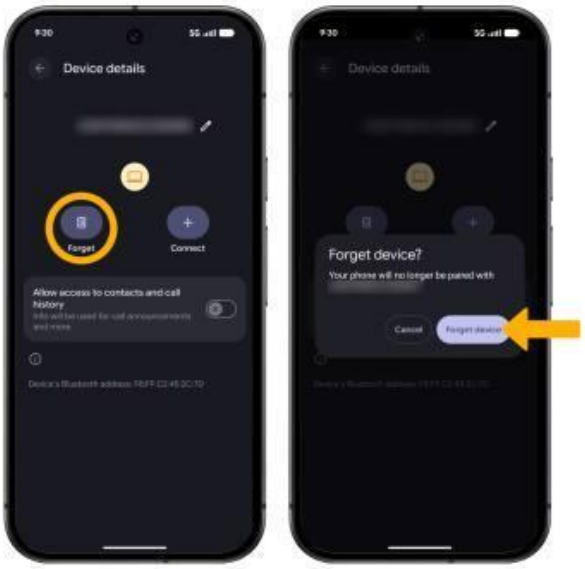

- **Tap the headphone name.**
- **Select Pair or Connect.**
- **Wait for the message "Connected".**

Step 6: Remove and pair again

- **If it still does not connect, select the headphone name in paired devices.**

- **Tap Forget or Unpair.**
- **Put the headphones in pairing mode again.**
- **Search and pair again.**

Step 7: Restart the devices

- **Turn OFF Bluetooth on the phone.**
- **Switch OFF the headphones.**
- **Restart the phone.**
- **Turn both devices ON and try connecting again.**

Step 8: Test the connection

- Play a song or video.

- Check whether sound comes through the headphones.
- Check the phone's audio output setting.
- 

The headphones are now connected and working.

Quick troubleshooting checklist

Problem	**Action**
Headphones won't turn on	**Charge them**
Bluetooth is off	**Turn Bluetooth on**
Headphones not visible	**Enable pairing mode**
Connection fails	**Forget and pair again**
No sound	**Check audio output and volume**
Still not working	**Restart and reset headphones**

Conclusion

By following these steps, I can identify the connection problem and fix it. If the headphones still do not connect, I would test them with another phone to check whether the problem is with the headphones or the original phone.

Q – 3 :-A user reports that their external webcam is not detected during a Zoom call on Windows 10. Write a checklist of 6 things to check or try to resolve the problem.

Hint: Consider device manager, privacy settings, and app permissions.

Ans- **Webcam Not Detected in Zoom – Windows 10**

Here is a simple checklist of **6 things to check and try** to fix the external webcam problem.

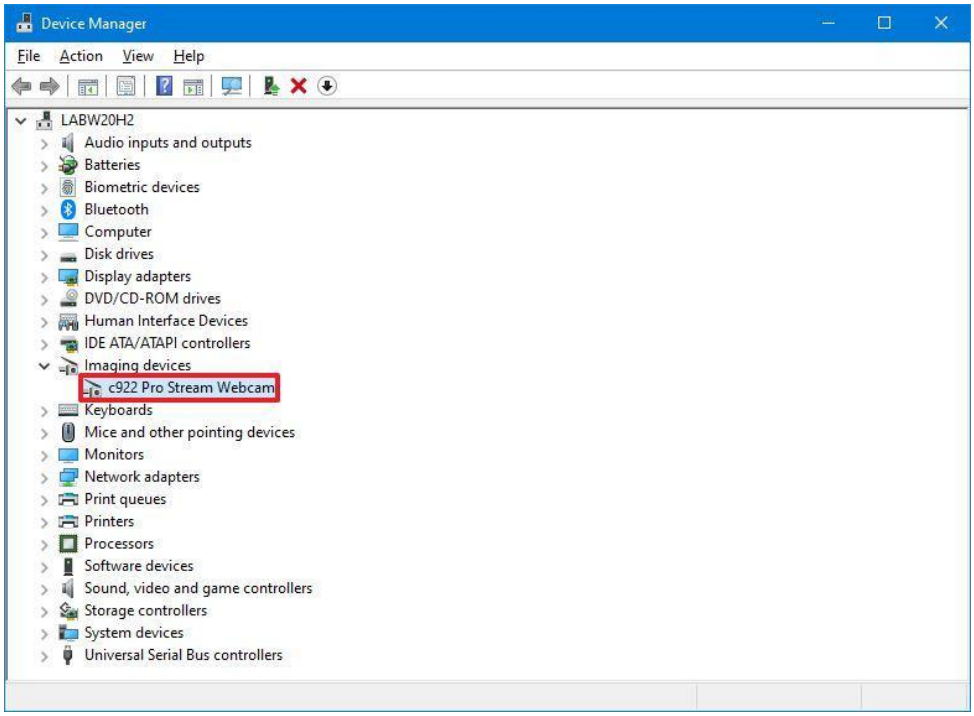

1. Check the USB connection

- Check that the webcam USB cable is connected properly.
- Unplug it and plug it in again.
- Try another USB port.

Check: Is the webcam light ON?

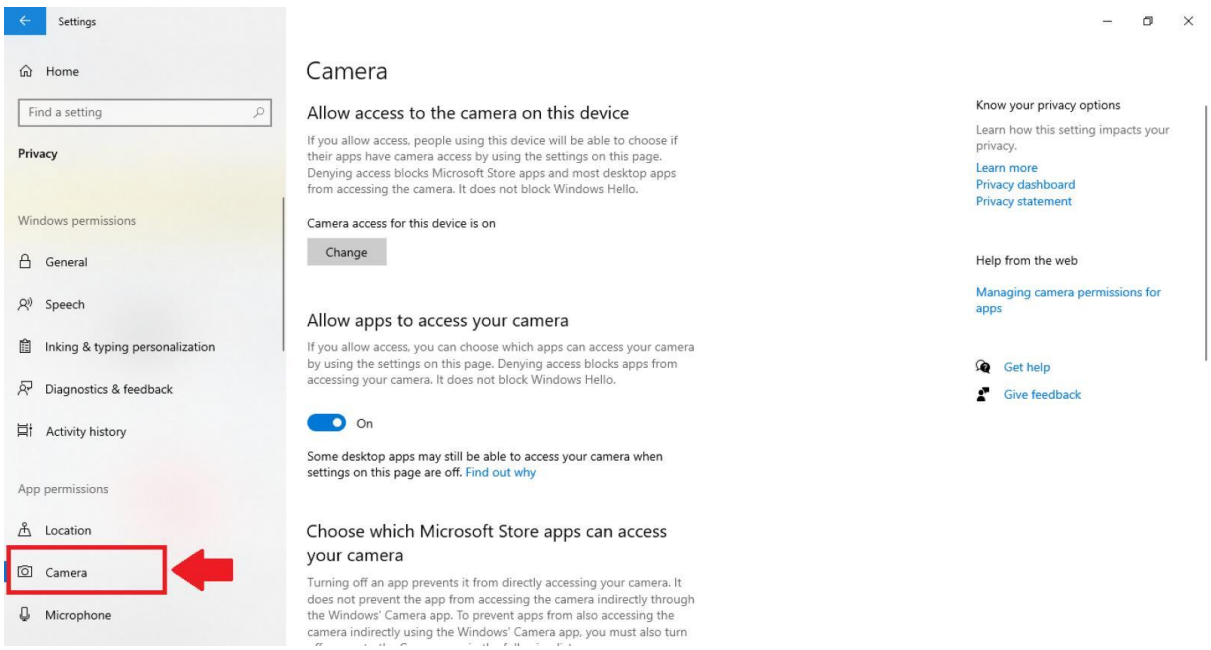

2. Check Device Manager

- **Right-click the Windows Start button.**
- **Select Device Manager.**
- **Find Cameras or Imaging devices.**
- **Check if your webcam is listed.**
- **If it has a warning sign, update its driver.**

Check: Is Windows detecting the webcam?

3. Check camera privacy settings

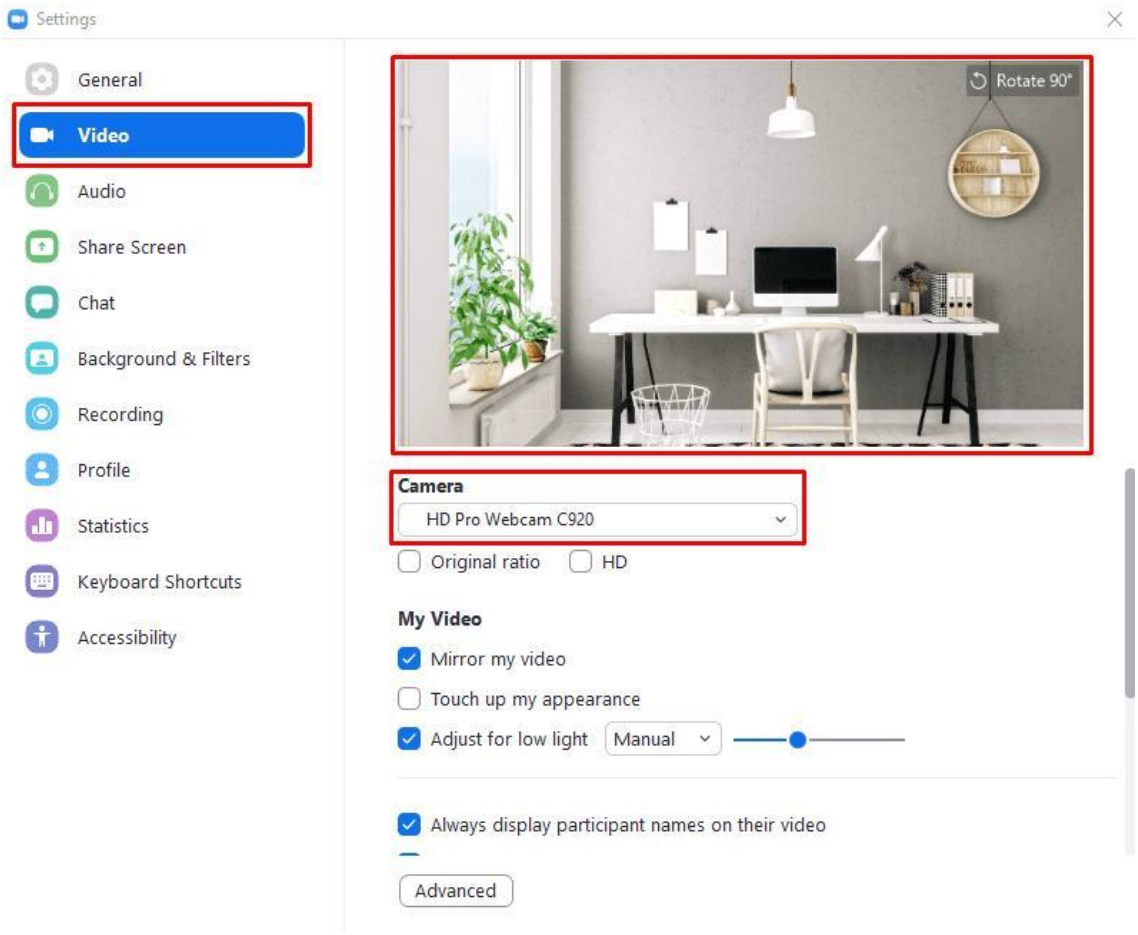

- **Open Settings.**

- **Click Privacy.**
- **Select Camera.**
- **Turn ON Allow apps to access your camera.**

Check: Is camera access allowed?

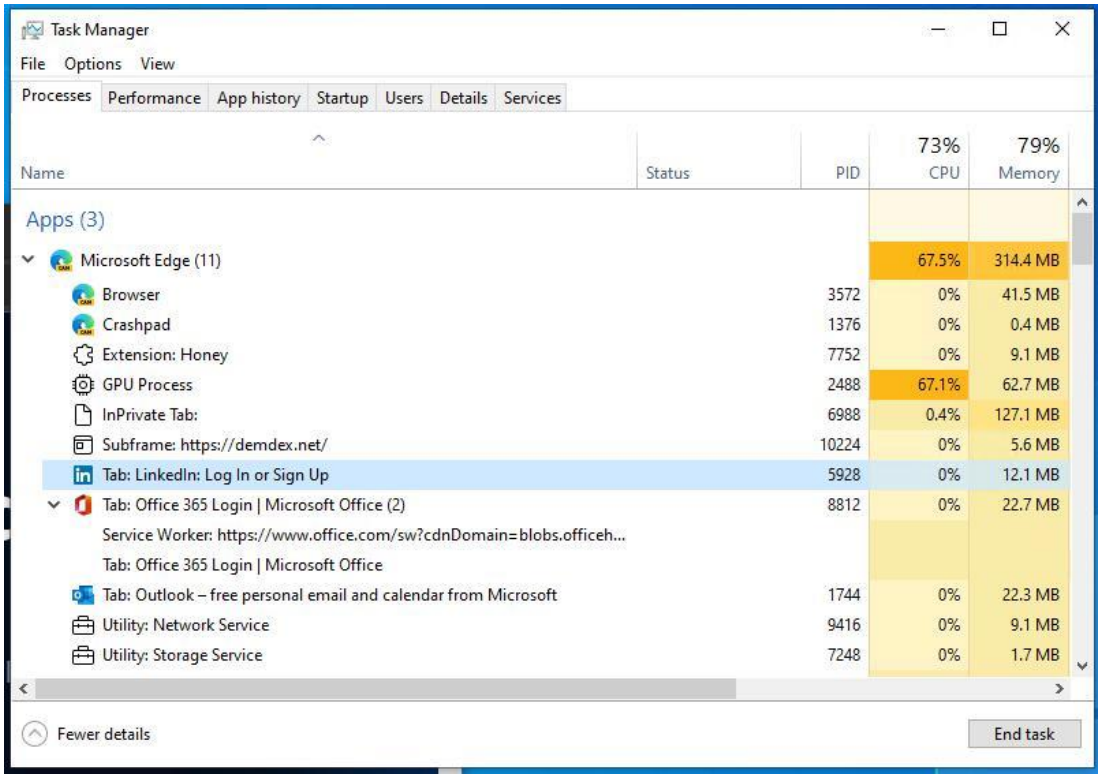

4. Check Zoom camera settings

- **Open Zoom.**
- **Click your profile picture.**
- **Open Settings.**
- **Select Video.**
- **Choose your external webcam from the camera list.**

Check: Is the correct webcam selected?

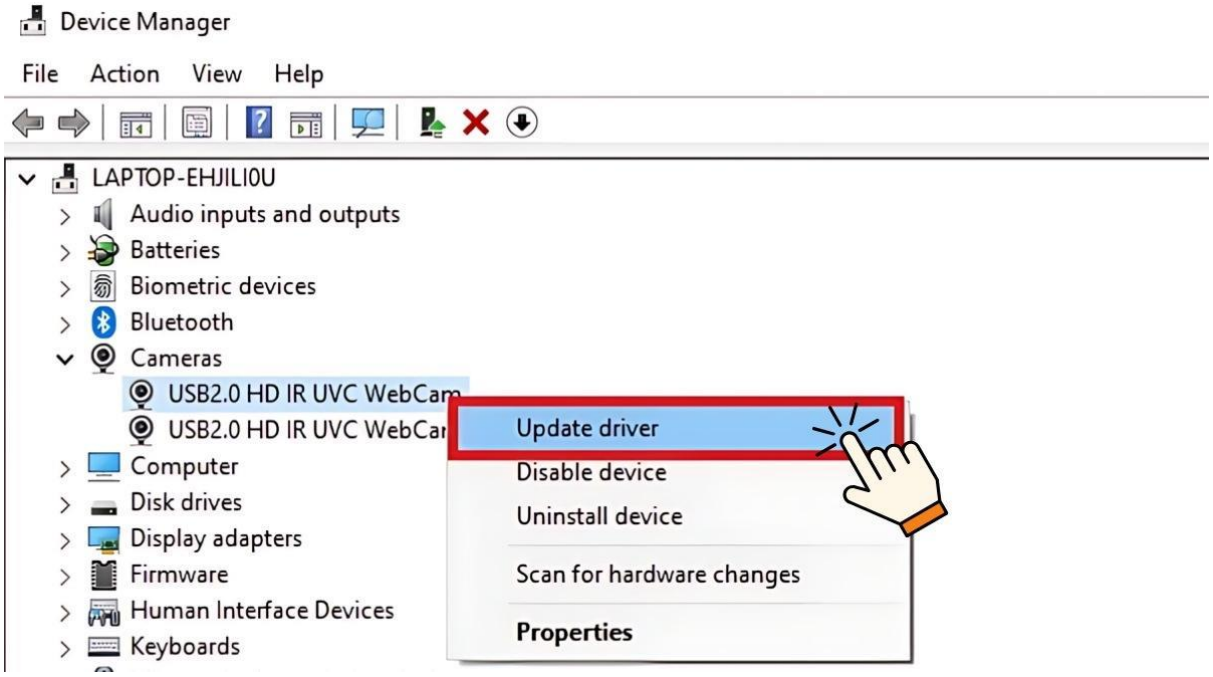

5. Close other apps using the webcam

- **Close apps such as Skype, Teams, or the Camera app.**
- **These apps may already be using the webcam.**
- **Close and reopen Zoom.**
- **Test the webcam again.**

Check: Is another app using the camera?

6. Update or reinstall the webcam driver

- **Open Device Manager.**
- **Find your webcam.**

- **Right-click its name.**
- **Select Update driver.**
- **Follow the instructions on the screen.**
- **Restart your computer.**

Check: Does the webcam work after restarting?

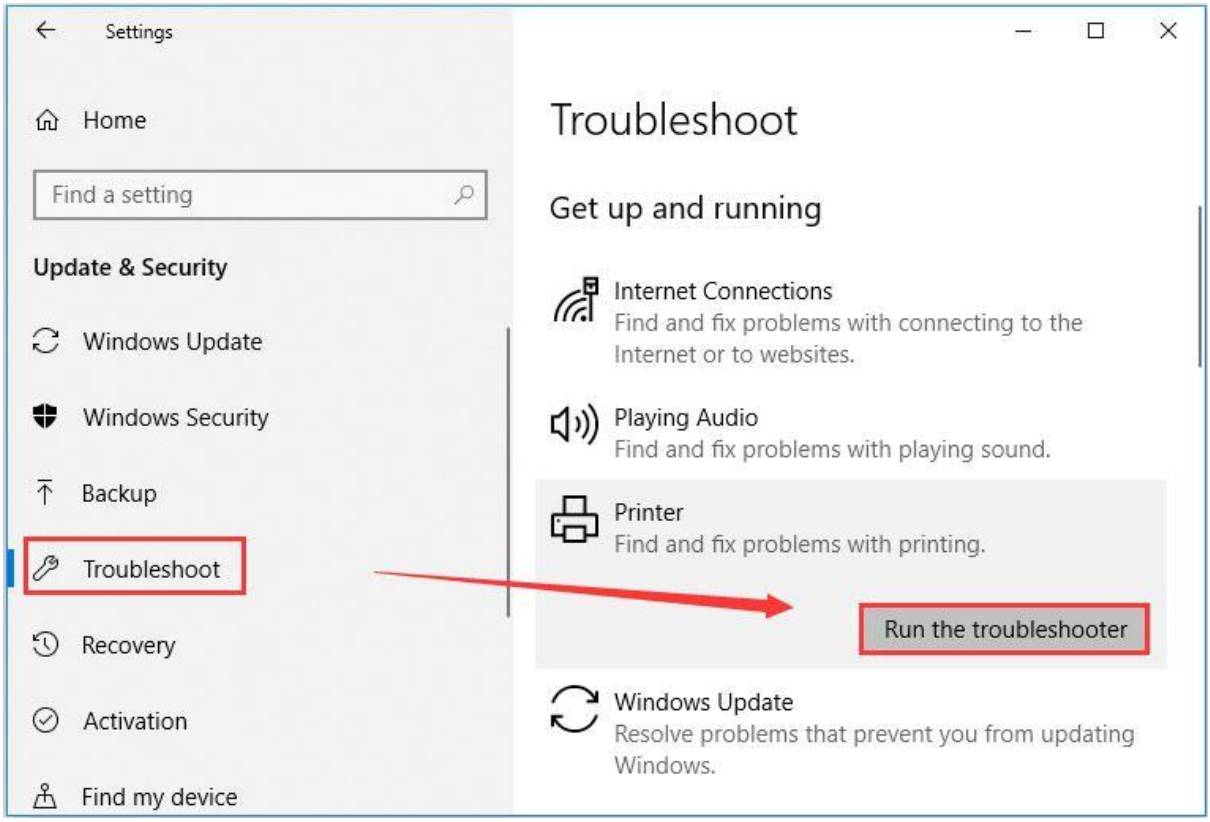

Expected result: The external webcam appears in Zoom's video settings and shows your live video.

Conclusion: Check the USB cable, Device Manager, Windows privacy settings, Zoom camera settings, other running apps, and webcam drivers. These six steps can help solve most webcam detection problems.

Q -4 :-You are helping a friend whose printer is showing 'offline' status on their PC. Describe how you would use the Windows Troubleshooter tool to try to fix the issue, and explain what information the tool provides during the process.

Ans- If my friend's printer shows Offline on the PC, I would use the Windows Troubleshooter to find and fix the problem.

Step-by-step process

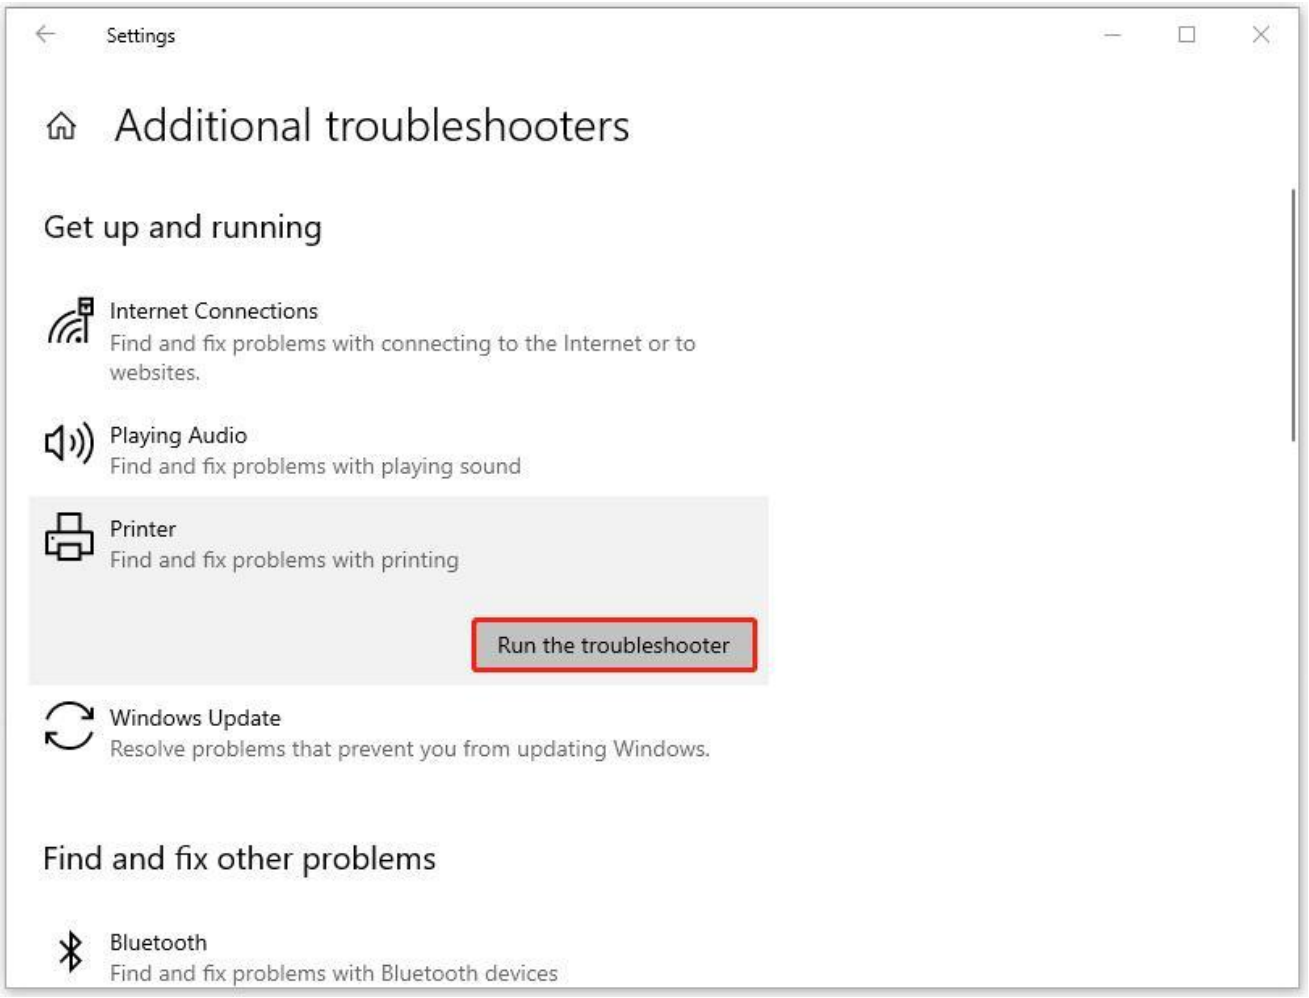

Step 1: Open Windows Settings

- **Click the Start button.**
- **Select Settings (gear icon).**

Step 2: Open Troubleshoot

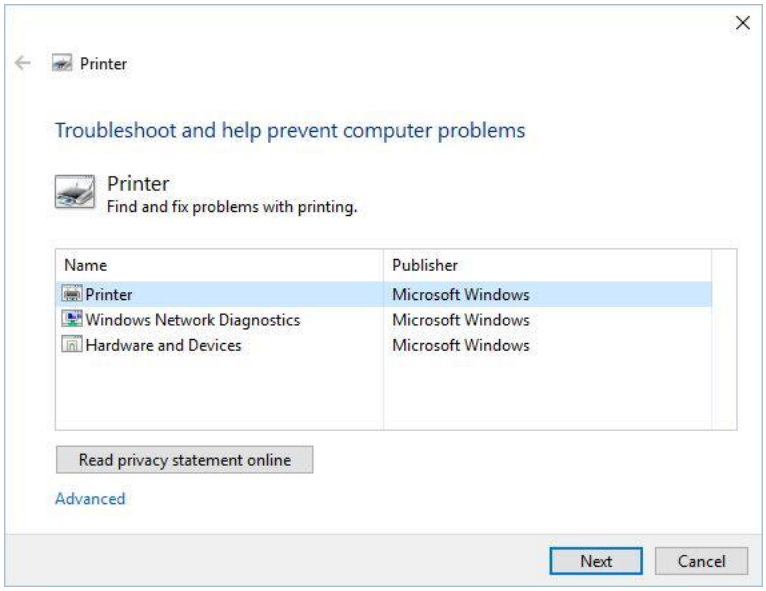

- **Click Update & Security.**
- **Select Troubleshoot from the left side.**
- **Click Additional troubleshooters.**

Step 3: Select Printer

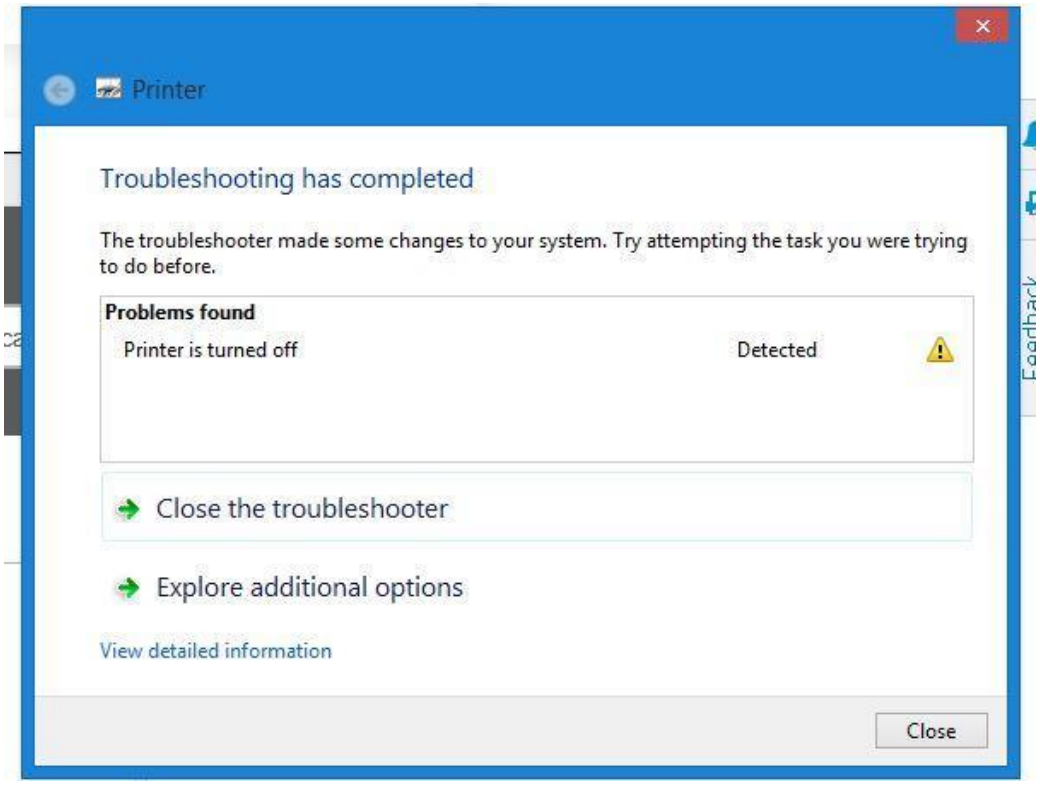

- **Find Printer in the list.**
- **Click Run the troubleshooter.**
- **Wait while Windows checks the printer.**

Step 4: Follow the instructions

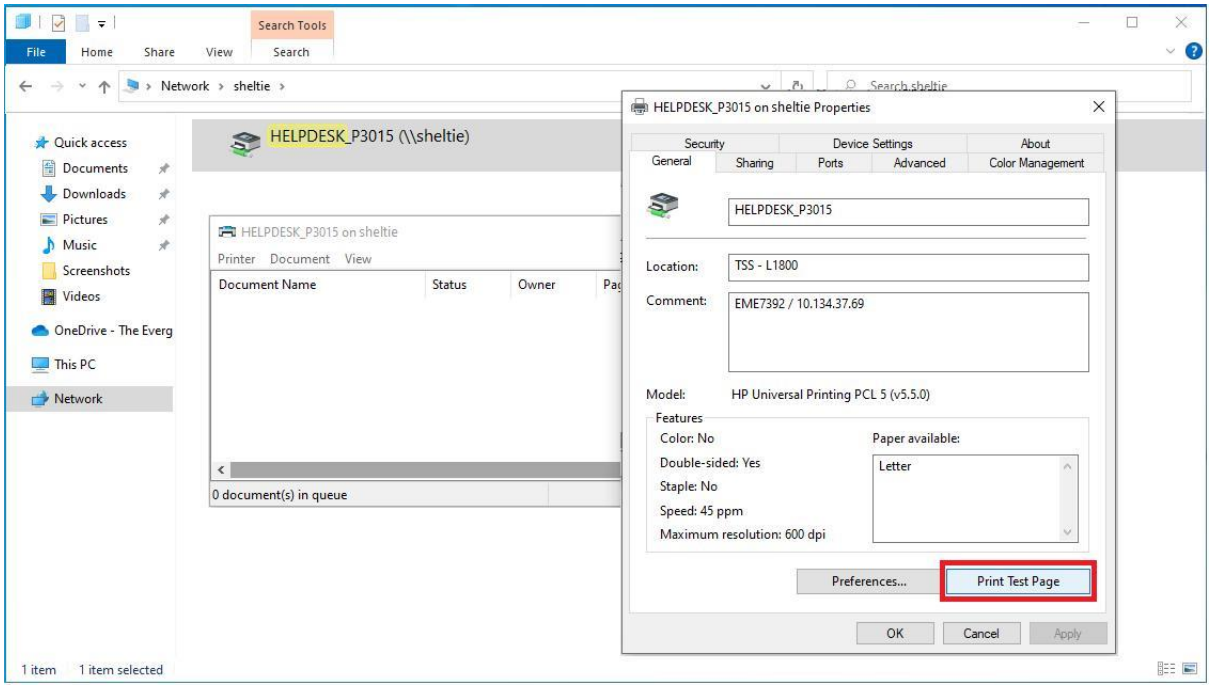

- **Windows checks for printer problems.**
- **It may ask me to select the printer.**
- **I select my friend's printer.**
- **I follow the instructions shown on the screen.**

Step 5: Apply the suggested fix

- **Windows may find problems with printer settings or connections.**
- **I select Apply this fix if Windows offers it.**
- **I wait for the repair process to finish.**

Step 6: Test the printer

- I restart the printer.
- I check whether its status says Ready or Online.
- I print a test page to confirm that it works.

What information does Windows Troubleshooter provide?

The Troubleshooter provides useful information, such as:

1. **Problem detected: Shows what issue Windows found.**
2. **Connection status: Checks whether the printer can communicate with the PC.**
3. **Driver problems: May identify printer driver issues.**
4. **Print Spooler problems: Checks whether the Windows printing service is working.**
5. **Suggested solutions: Gives steps to fix detected problems.**
6. **Troubleshooting results: Shows which problems were fixed and which still need attention.**

Final result :-

-Printer working

If the Troubleshooter fixes the issue, the printer should show Online or Ready, and it should print successfully.

Conclusion: Windows Troubleshooter helps find printer problems, explains what is wrong, and suggests possible solutions. It makes fixing an offline printer easier, even for beginners.
