Day-5

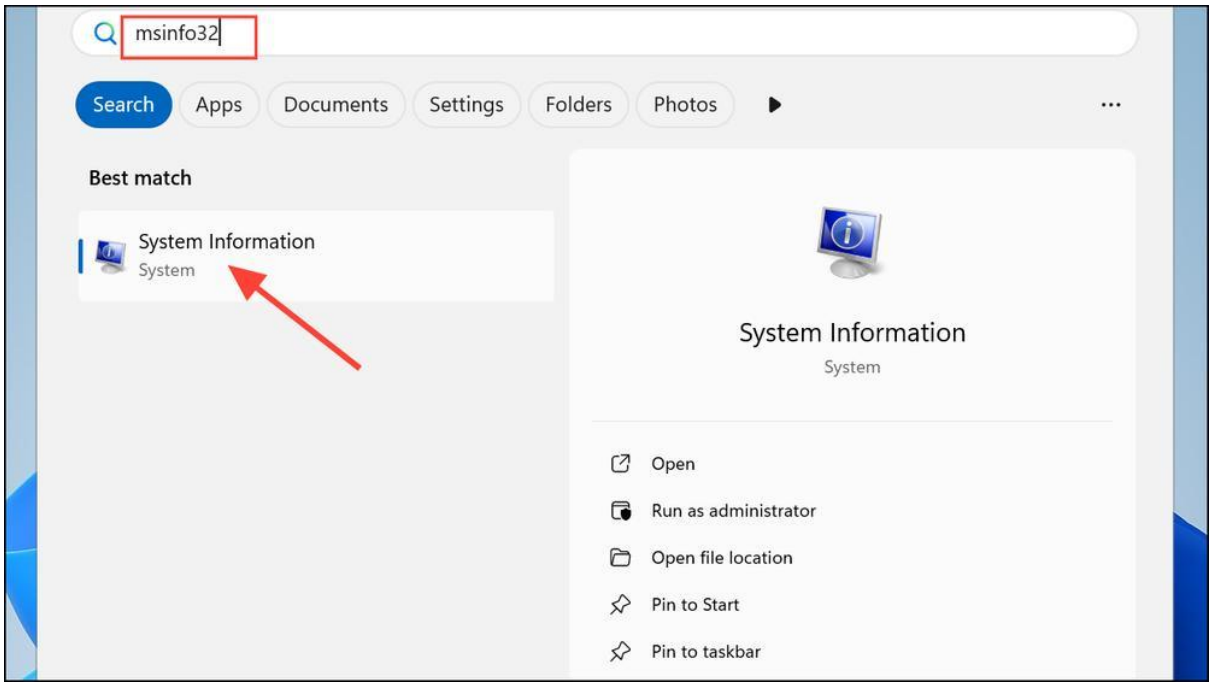

Operating system information

- Windows , linux . macOS installation and adjust OS setting.

Q-1 :-On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

Ans-I can show you how to find these details on your Windows laptop or PC in very simple steps.

Step 1: Open System Information

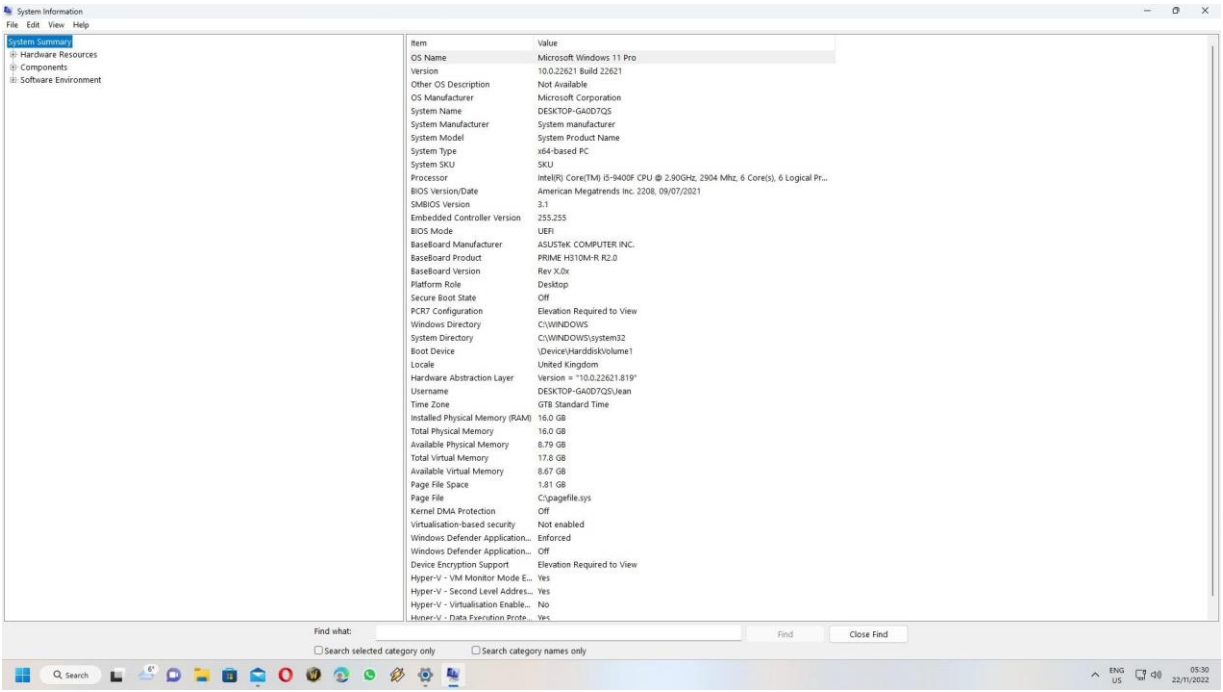

1. Press **Windows + R** on your keyboard.
2. Type msinfo32.
3. Press **Enter**.
4. The **System Information** window will open.

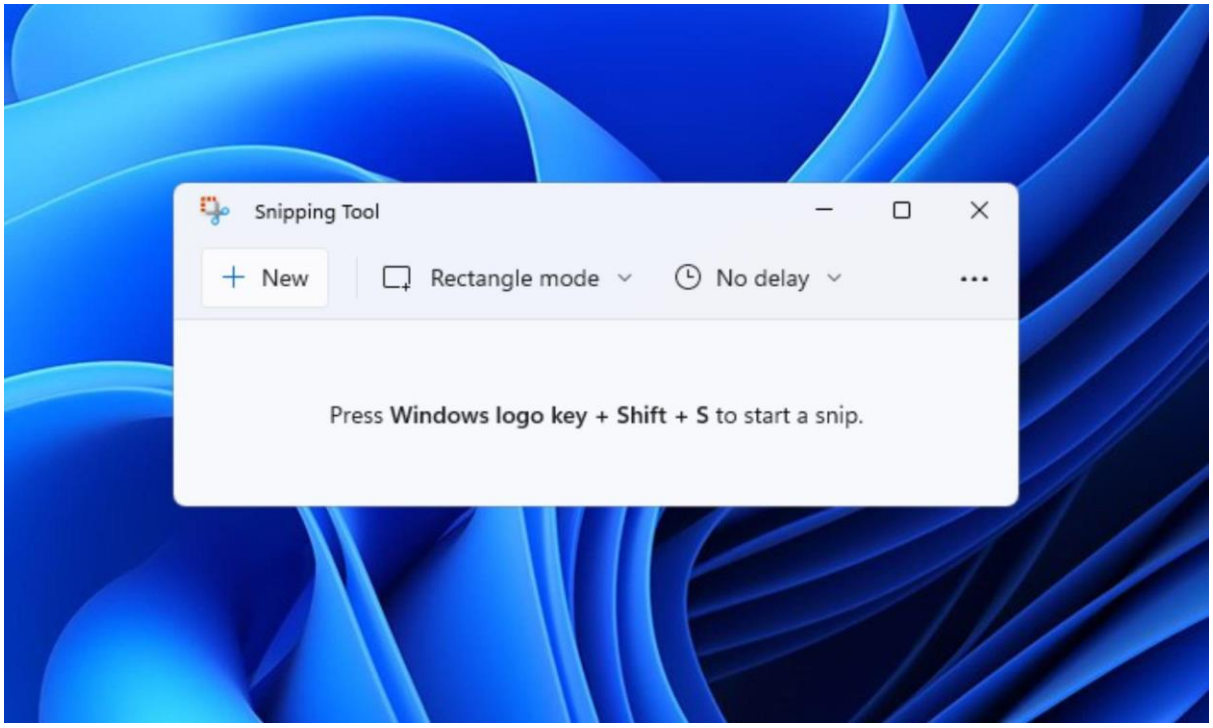

Step 2: Find your computer details

Look for these details:

- **OS Name:** Your Windows version (Windows 10 or 11).
- **Version:** Your Windows version number.
- **Processor:** Your computer's CPU.
- **Installed Physical Memory (RAM):** Your computer's RAM size.

Step 3: Take a screenshot

1. Keep the System Information window open.
2. Press **Windows + Shift + S**.
3. Select the area showing OS, Processor and RAM.
4. Save the screenshot.

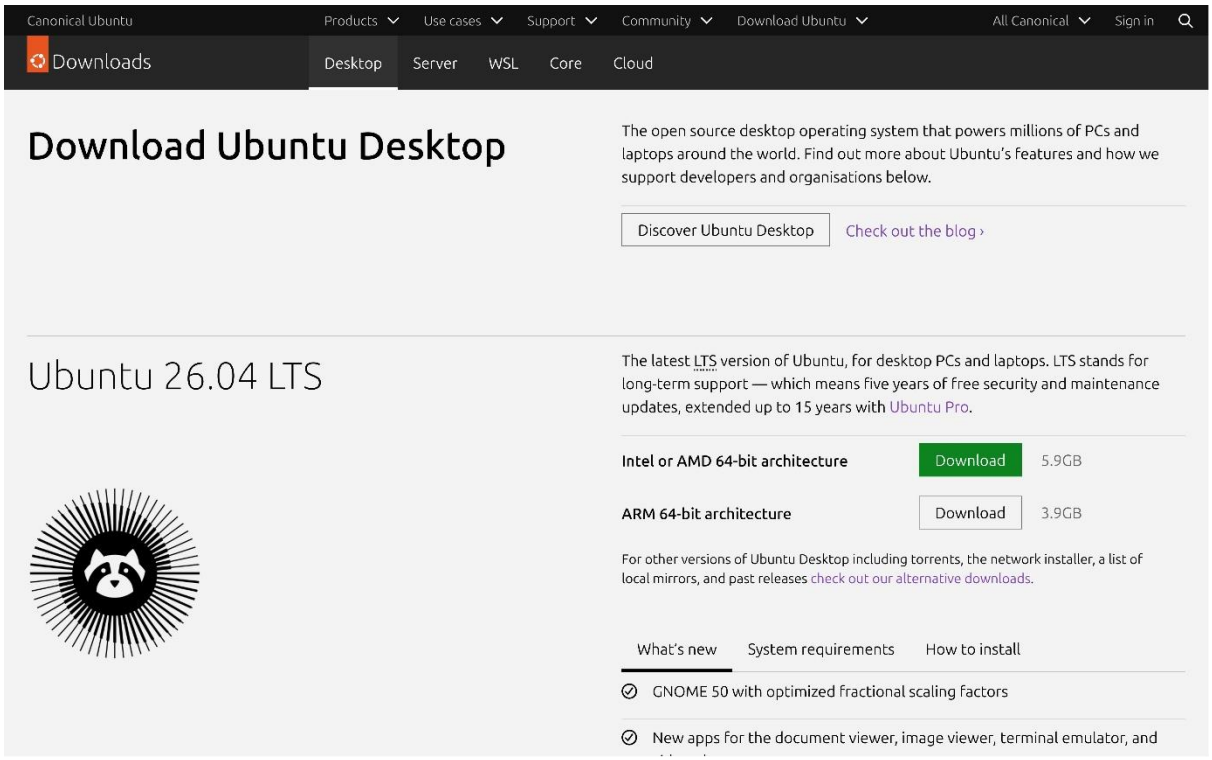

Done! Your screenshot will show your Windows version, processor and RAM.

Q-2 :-Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation.

Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Ans-Here is a simple practical guide with real example photos to help you complete your Linux installation task.

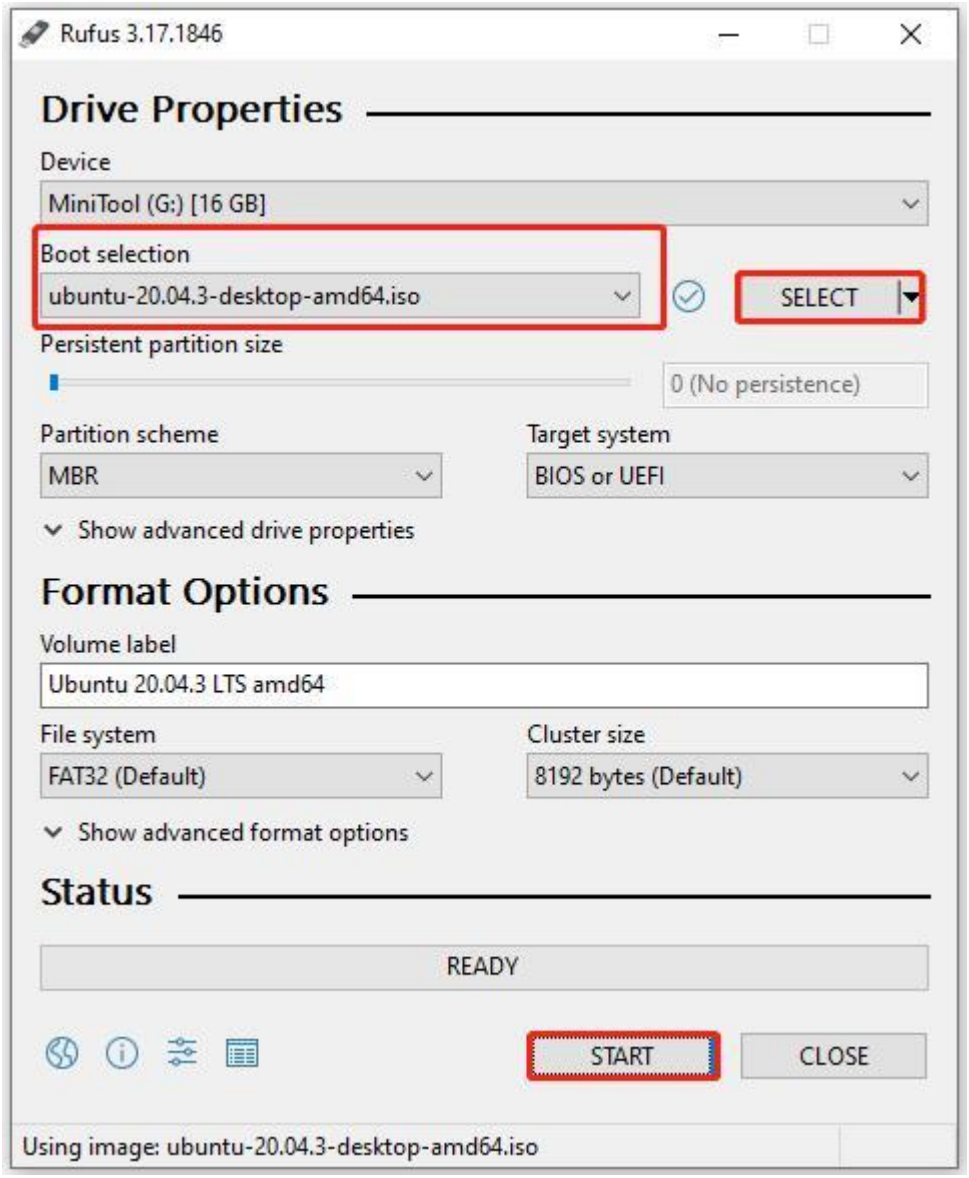

Step 1: Download Ubuntu Linux

1. Open the official Ubuntu website.
2. Click **Download Ubuntu Desktop**.
3. Download the ISO file.

Step -2 : Open refus

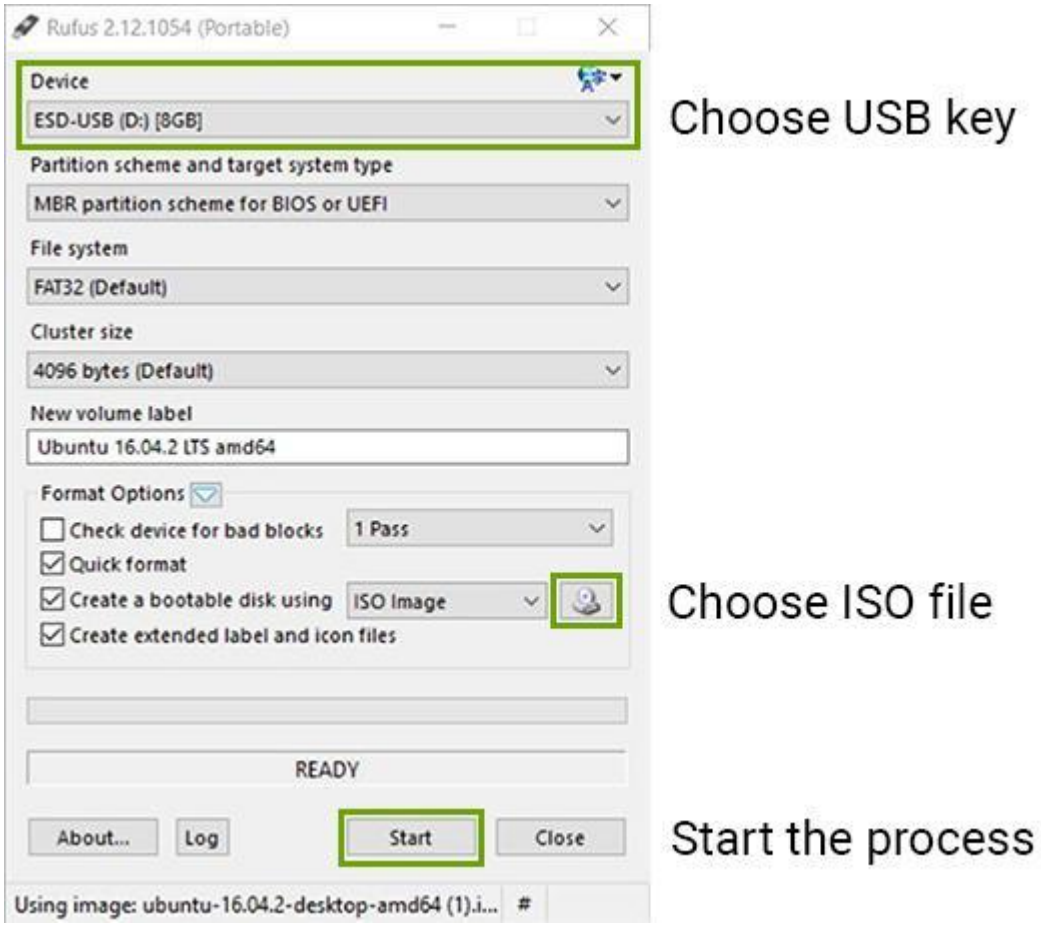

1. Insert an 8 GB or larger USB drive.
2. Download and open Rufus.
3. Select your USB drive.
4. Select the Ubuntu ISO file.

Step 3: Create a bootable USB

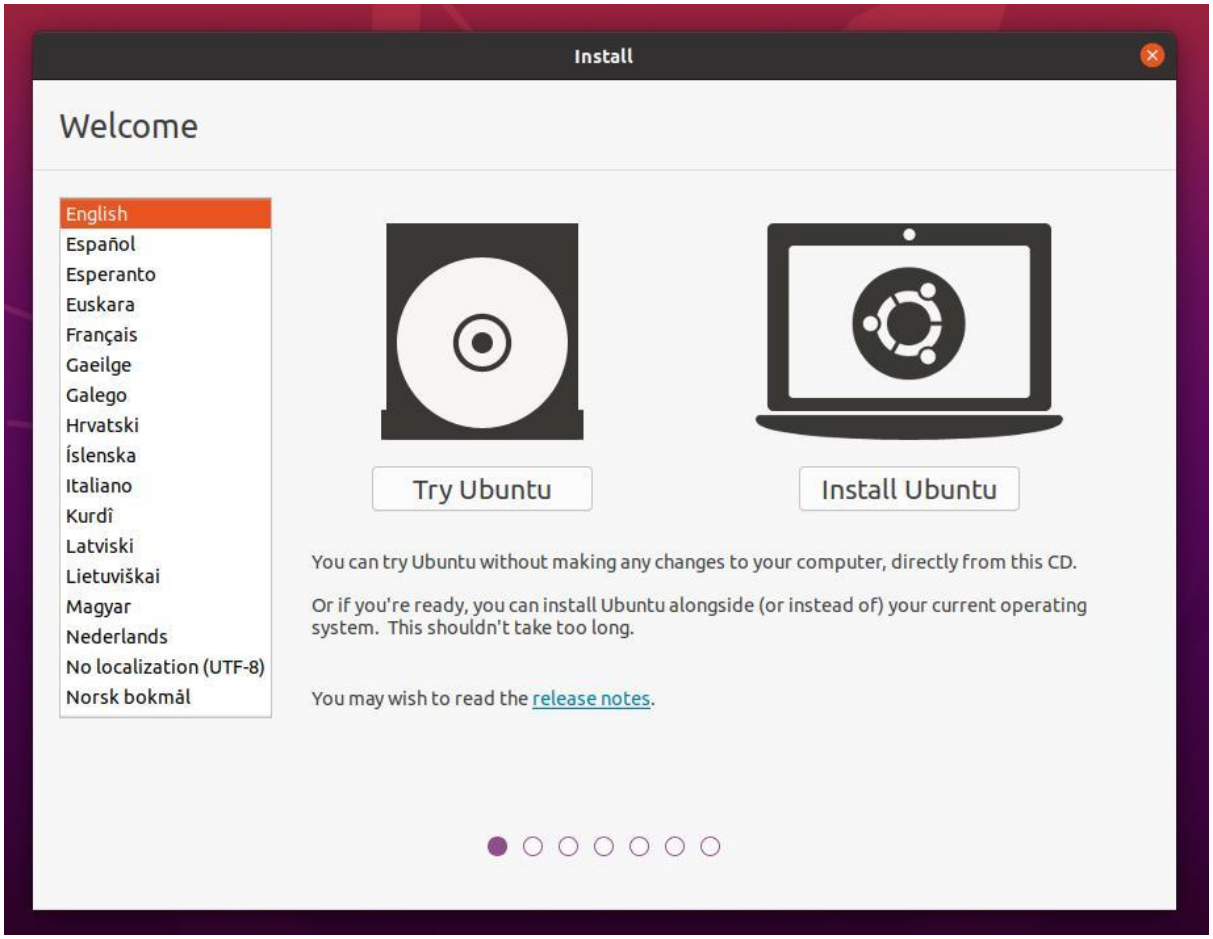

1. Click **START**.
2. Confirm the warning.
3. Wait until Rufus finishes.
4. Your bootable USB is ready.

This process erases all data on the selected USB drive. Back up your files first.

Step 4: Start Ubuntu installation

1. Restart your computer.
2. Boot from the USB drive.
3. Select **Install Ubuntu**.
4. Follow the installation instructions.

Alternative: If you don't have a USB drive, use VirtualBox and mount the Ubuntu ISO in a virtual machine

Screenshots for your practical assignment

Save these four screenshots as proof:

- Ubuntu ISO downloaded.
- Rufus with Ubuntu ISO selected.
- Rufus showing the completed process.
- Ubuntu installation screen.

Q-3 :- On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Hint: Find 'Language & Region' in System Preferences to add or change languages.

Ans-Here is a simple step-by-step guide to change the **desktop wallpaper and system language on macOS**.

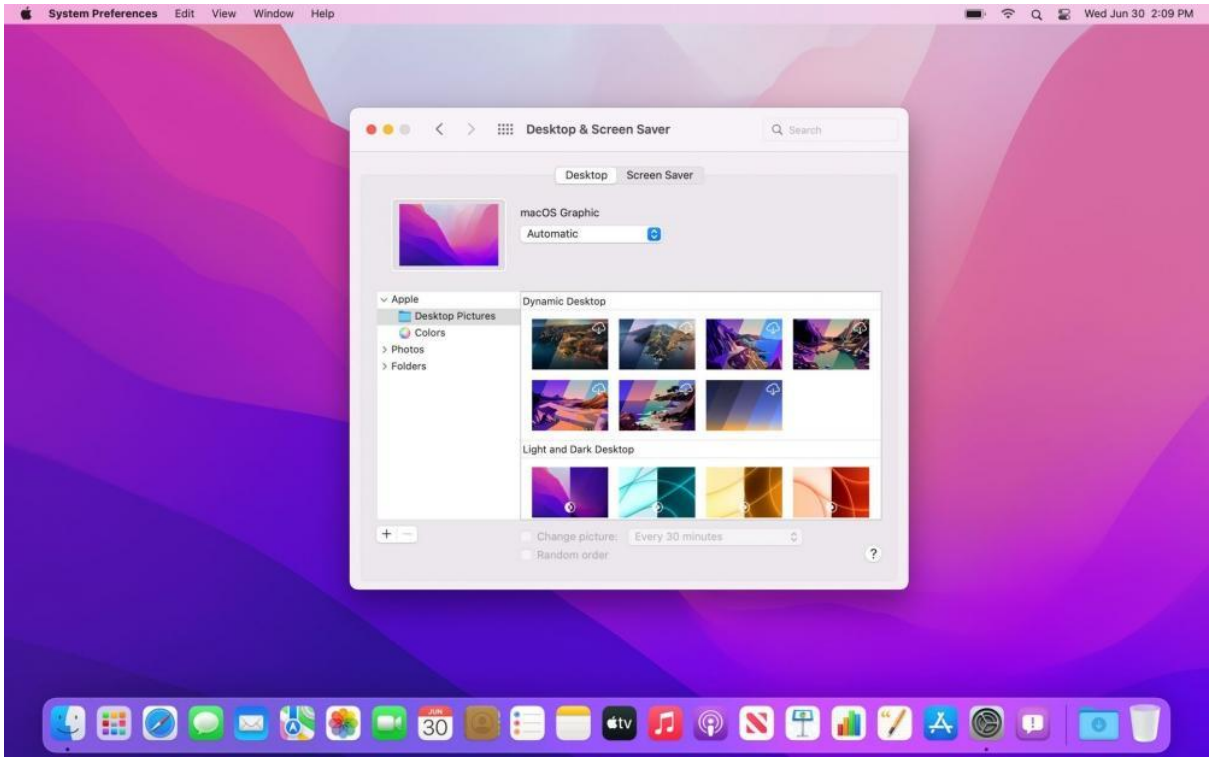

Step 1: Open System Preferences

1. Click the Apple logo (□) in the top-left corner.
2. Click **System Preferences**.
3. The settings window will open.

Step 2: Change the desktop wallpaper

1. Click **Desktop & Screen Saver**.
2. Choose a wallpaper you like.
3. Click the wallpaper to apply it.
4. Your desktop background will change.

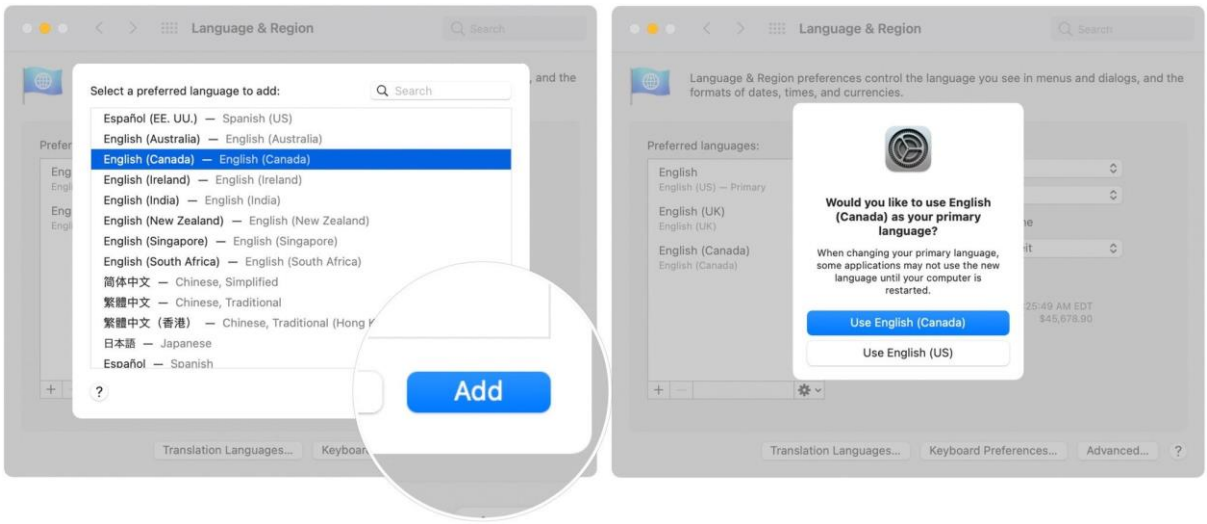

Step 3: Change the system language to Gujarati or Hindi

1. Go back to **System Preferences**.
2. Click **Language & Region**.
3. Click the **+ (plus)** button.
4. Select **Gujarati** or **Hindi**.
5. Click **Add**.
6. Choose the new language as the primary language if prompted.

Step 4: Apply the language

1. Confirm your selected language.
2. Restart or log out if macOS asks.
3. Your system menus should now appear in Gujarati or Hindi.

Final screenshots for your assignment

Take these 3 screenshots as proof:

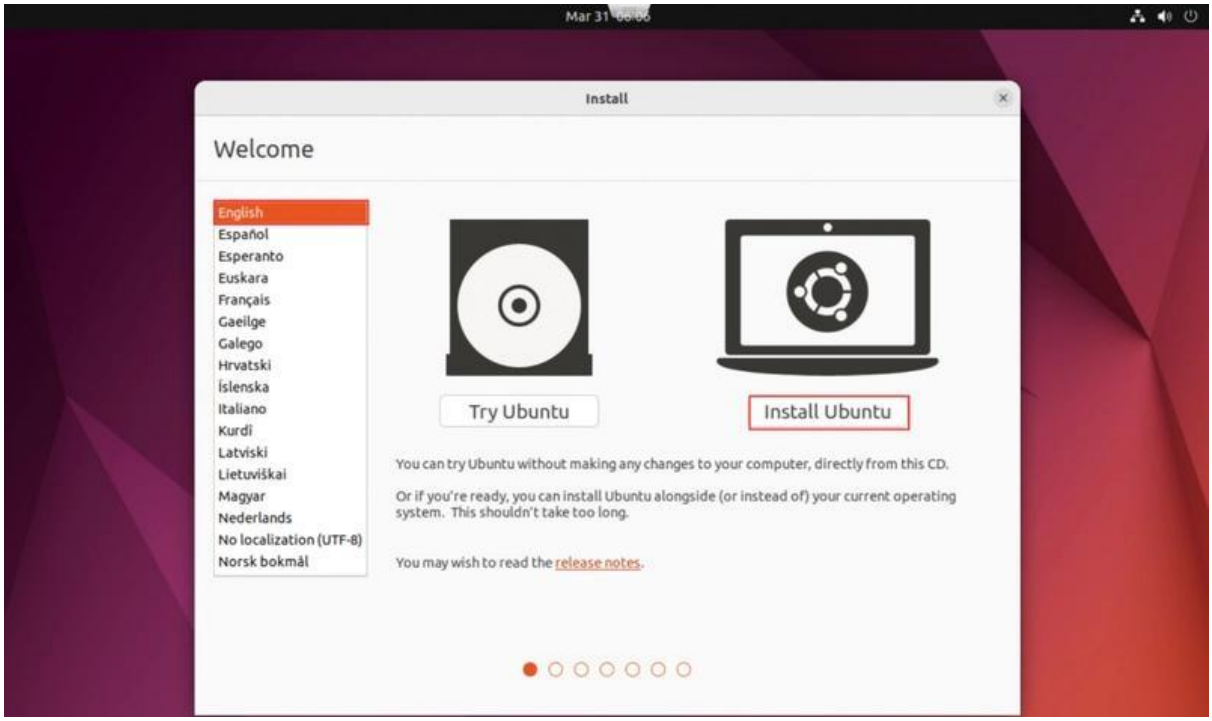

- Desktop showing your new wallpaper.
- Language & Region showing Gujarati or Hindi.
- Your Mac desktop after changing the language.

Q-4 :- Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

Ans-Here is a simple practical guide to install Ubuntu Linux, create a user named **gamer**, and enable automatic login.

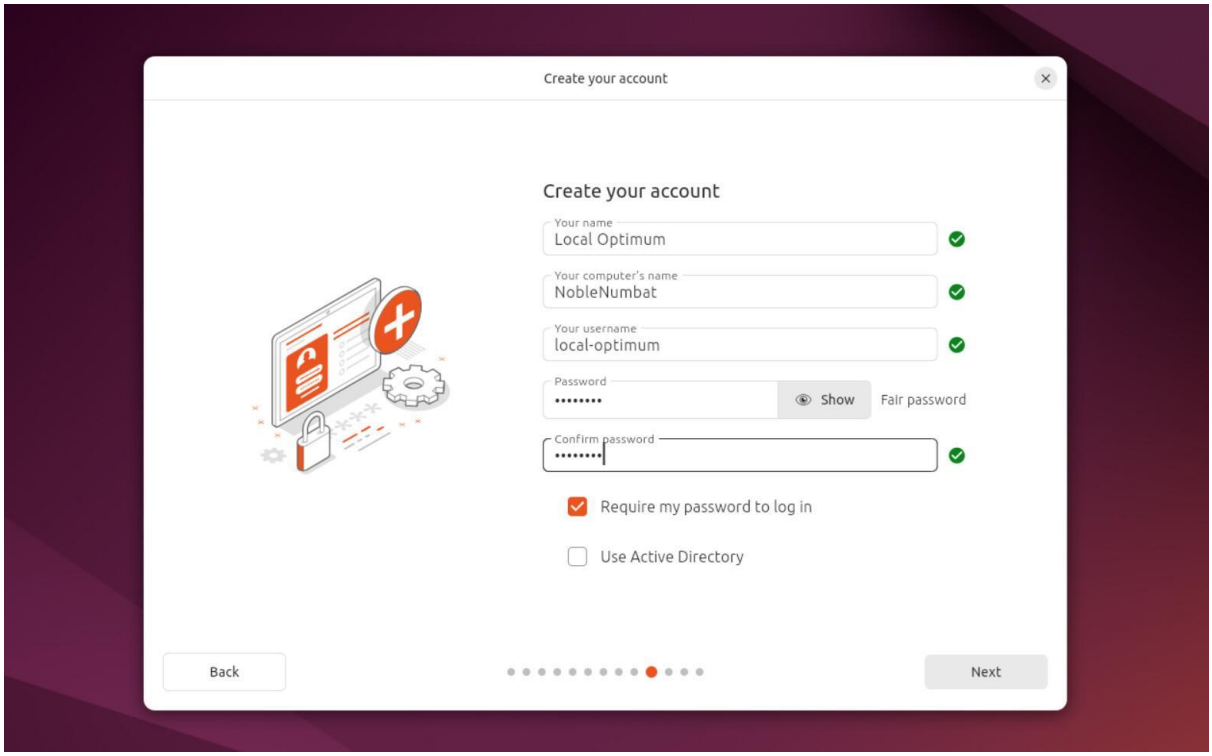

You can do this using VirtualBox on your Windows computer without removing Windows.

Step 1: Install Ubuntu Linux

1. **Open VirtualBox.**
2. **Create a new virtual machine.**
3. **Select your Ubuntu ISO file.**
4. **Start the virtual machine.**
5. **Choose Install Ubuntu.**
6. **Follow the installation instructions.**

Step 2: Create a new user named gamer

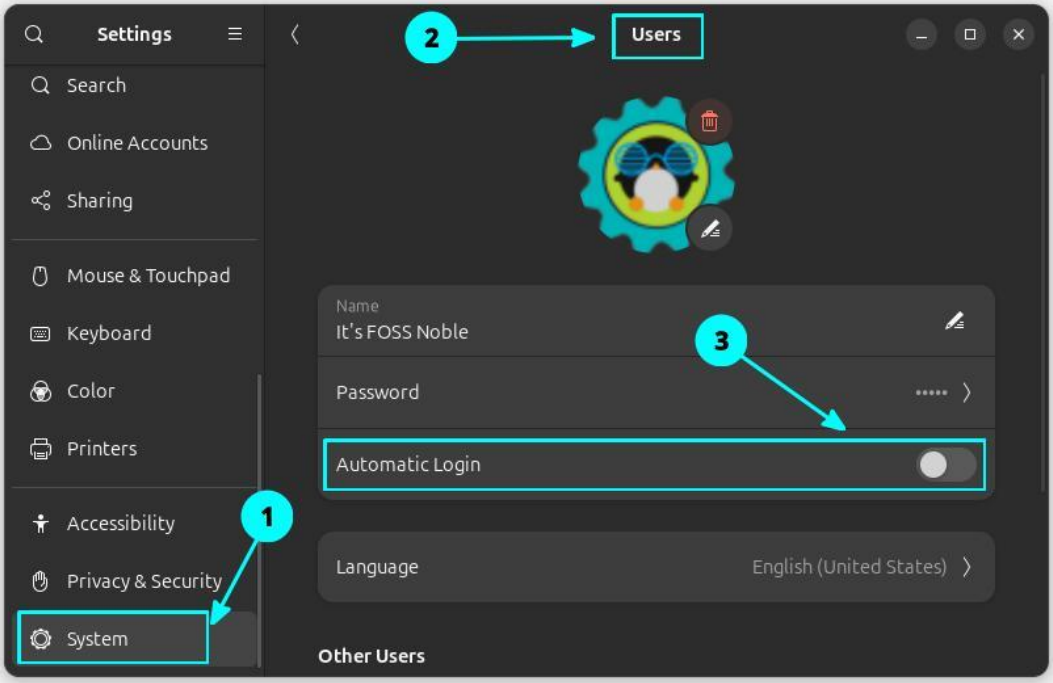

During installation, Ubuntu asks you to create an account.

Enter these details:

- **Your name: gamer**
- **Your computer's name: gamer-pc**
- **Username: gamer**
- **Password: Choose your own password.**

Click Continue and finish the installation.

Step 3: Enable automatic login

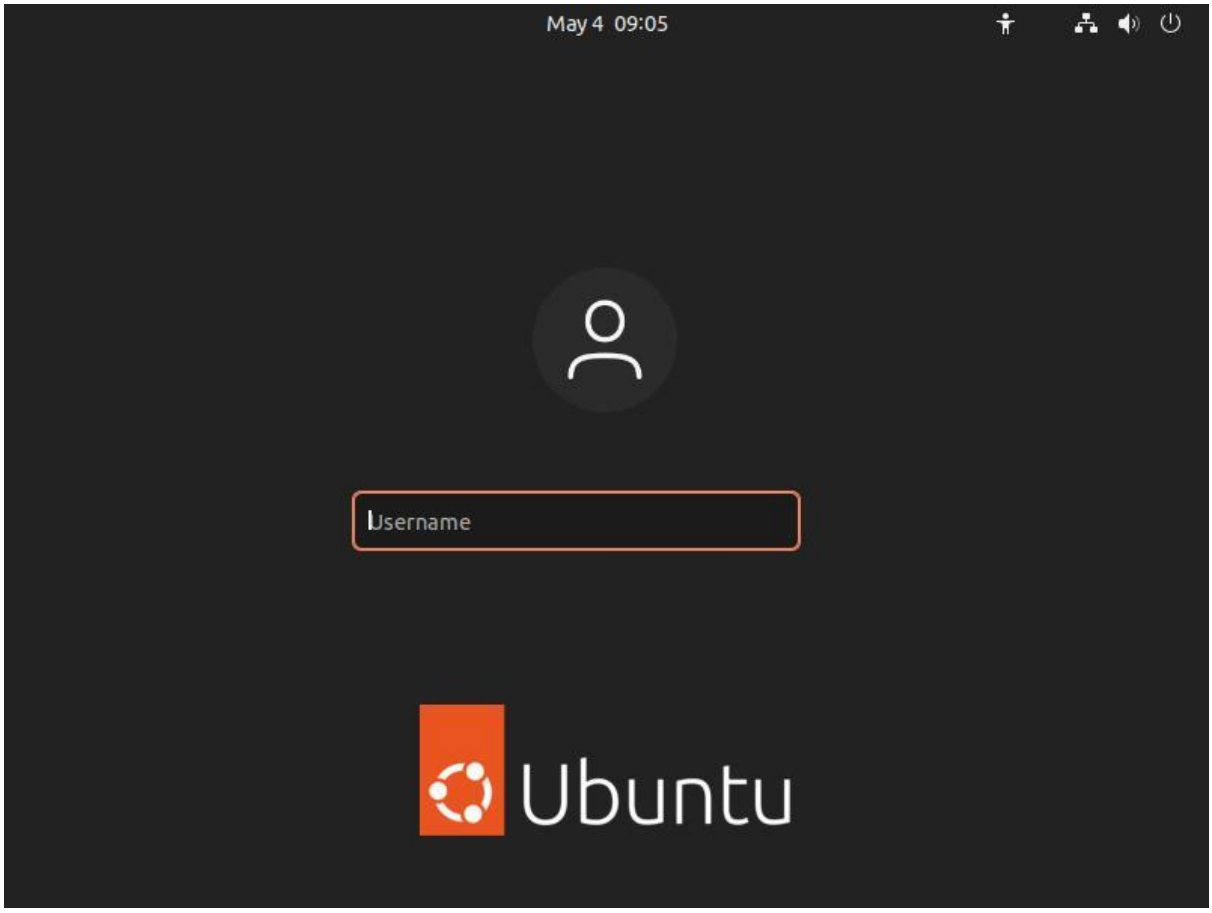

1. **Open Settings.**
2. **Click System and then Users (on some versions, Users is directly in Settings).**
3. **Click Unlock and enter your password.**
4. **Select the gamer account.**
5. **Turn ON Automatic Login.**

Now Ubuntu will log in automatically as gamer when the virtual machine starts

Step 4: Check the login screen

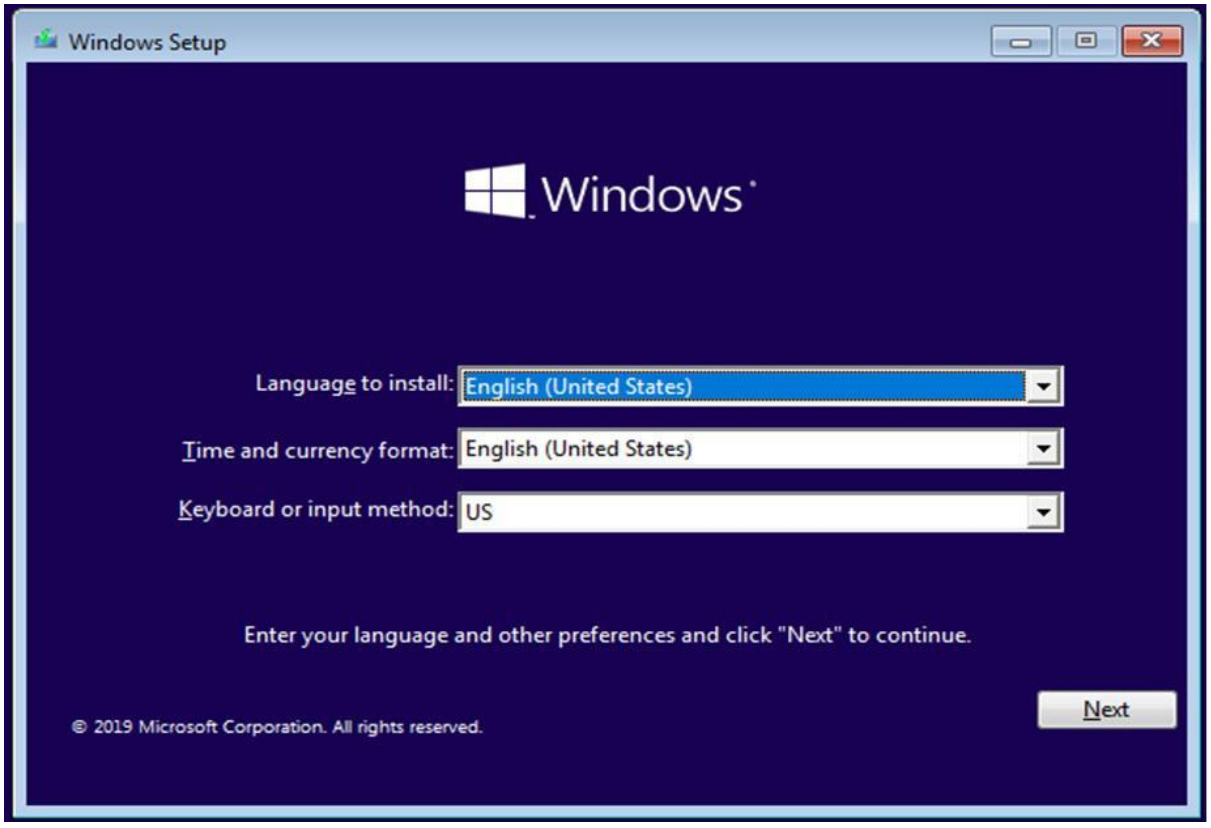

- **Log out or restart Ubuntu.**
- **Before enabling automatic login, the login screen should show the gamer username.**
- **After enabling automatic login, Ubuntu may skip the login screen and open the desktop directly.**

May 4 09:05
Username
Ubuntu

Q-5 :- Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

Ans-Step-by-step guide: How to install Windows 10 on a laptop

Windows 10 reached the end of normal support on October 14, 2025. It no longer receives regular free security updates. If your laptop supports it, Windows 11 is the safer choice.

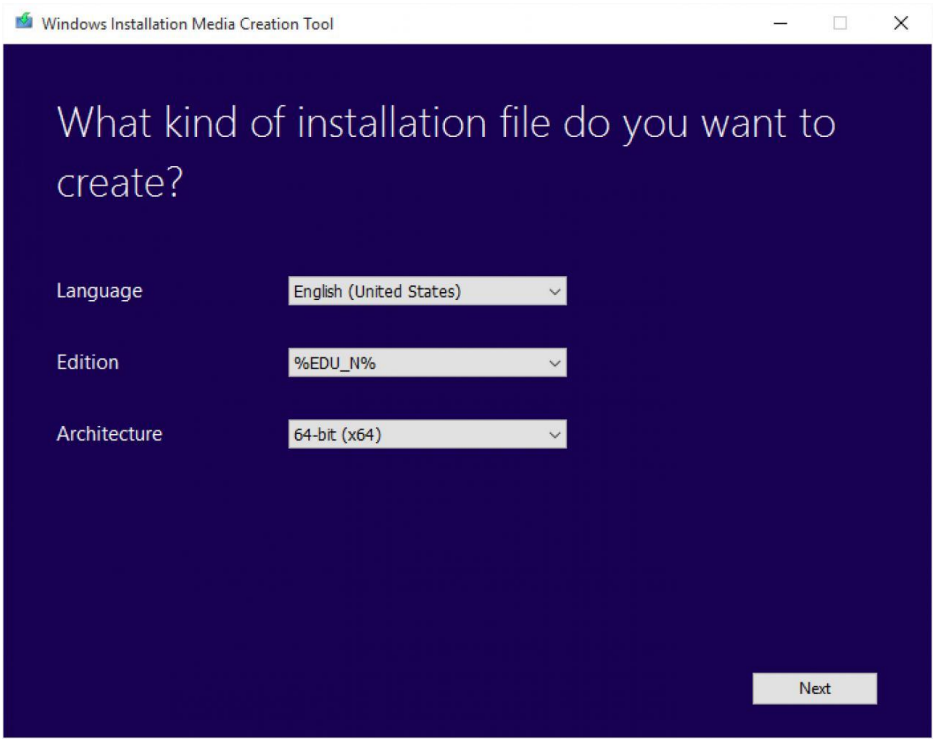

If you still need Windows 10 for an older laptop or a specific application, follow the steps below and check Microsoft's available extended security options.

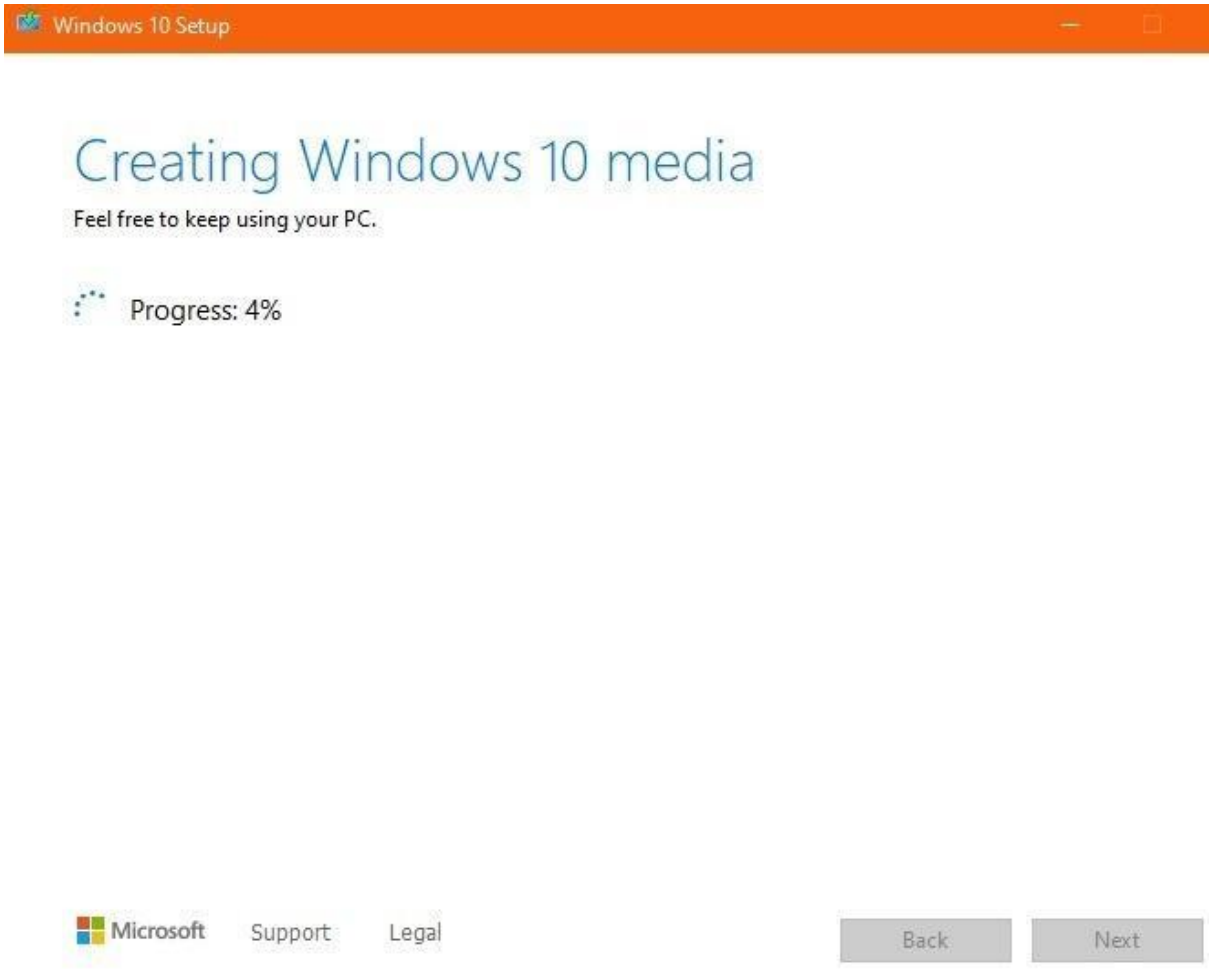

1. Things you need before installation

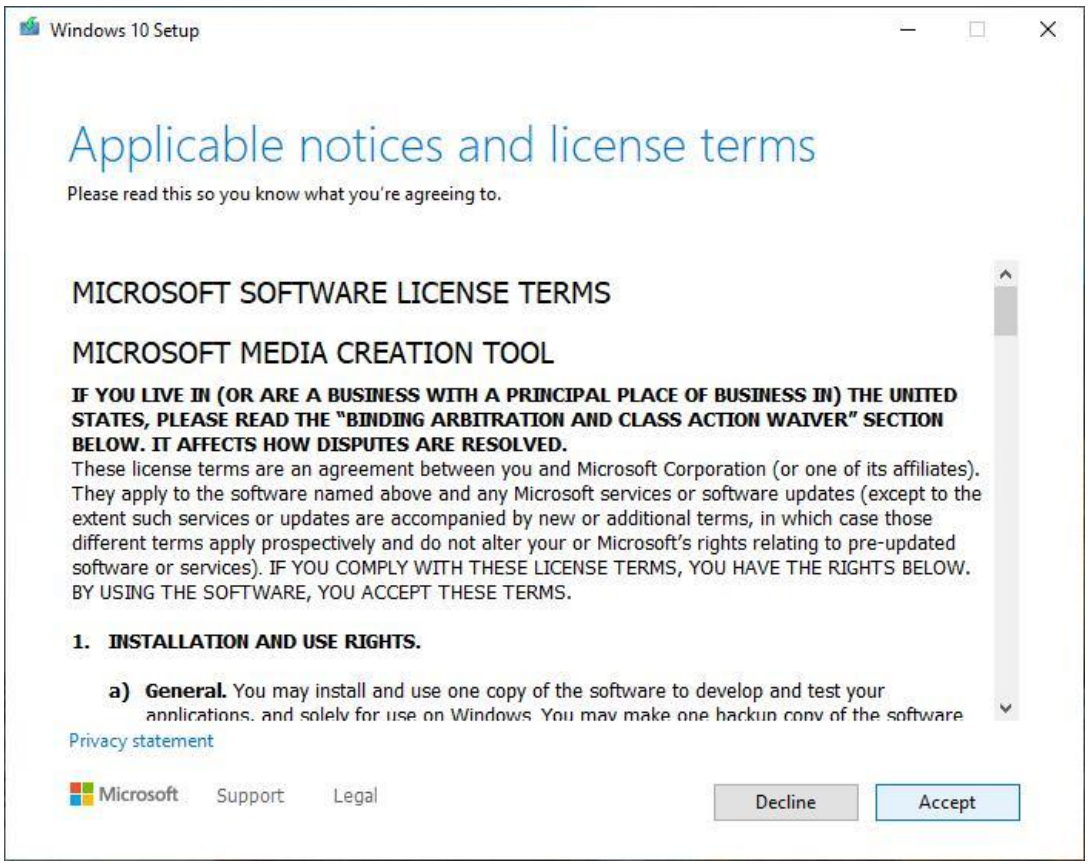

- **A USB pen drive of at least 8 GB.**
- **A working computer with internet access.**
- **A Windows 10 licence or digital activation entitlement.**
- **Your laptop charger.**
- **A backup of your important files.**

Warning: Installing Windows can erase your files. Save your photos, documents, and other important data before starting.

2. Create a Windows 10 bootable USB

Applicable notices and license terms
Please read this so you know what you're agreeing to.
MICROSOFT SOFTWARE LICENSE TERMS
MICROSOFT MEDIA CREATION TOOL
IF YOU LIVE IN (OR ARE A BUSINESS WITH A PRINCIPAL PLACE OF BUSINESS IN) THE UNITED STATES, PLEASE READ THE "BINDING ARBITRATION AND CLASS ACTION WAIVER" SECTION BELOW. IT AFFECTS HOW DISPUTES ARE RESOLVED.
These license terms are an agreement between you and Microsoft Corporation (or one of its affiliates). They apply to the software named above and any Microsoft services or software updates (except to the extent such services or updates are accompanied by new or additional terms, in which case those different terms apply prospectively and do not alter your or Microsoft's rights relating to pre-updated software or services). IF YOU COMPLY WITH THESE LICENSE TERMS, YOU HAVE THE RIGHTS BELOW. BY USING THE SOFTWARE, YOU ACCEPT THESE TERMS.
1. INSTALLATION AND USE RIGHTS.
a) General. You may install and use one copy of the software to develop and test your
Privacy statement

Decline
Accept

1. **Open the official Windows 10 download page .**
2. **Click Download tool now.**
3. **Open the downloaded Media Creation Tool.**
4. **Accept the licence terms.**
5. **Select Create installation media (USB flash drive, DVD, or ISO file).**
6. **Choose your language and Windows edition.**
7. **Select USB flash drive.**
8. **Choose your USB drive.**
9. **Wait for the download and USB preparation to finish.**

Your USB is now ready.

3. Start the laptop from USB

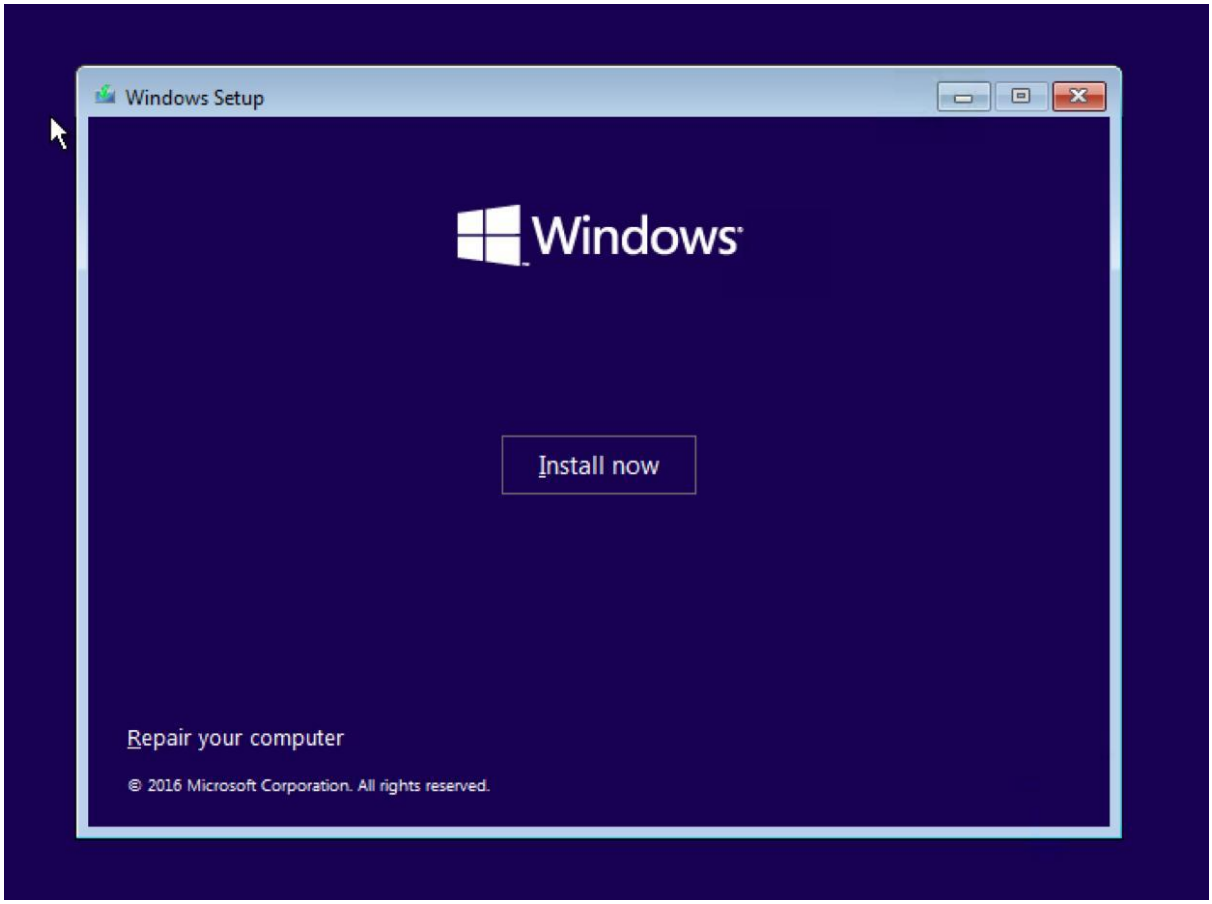

1. **Insert the USB into your laptop.**
2. **Restart the laptop.**

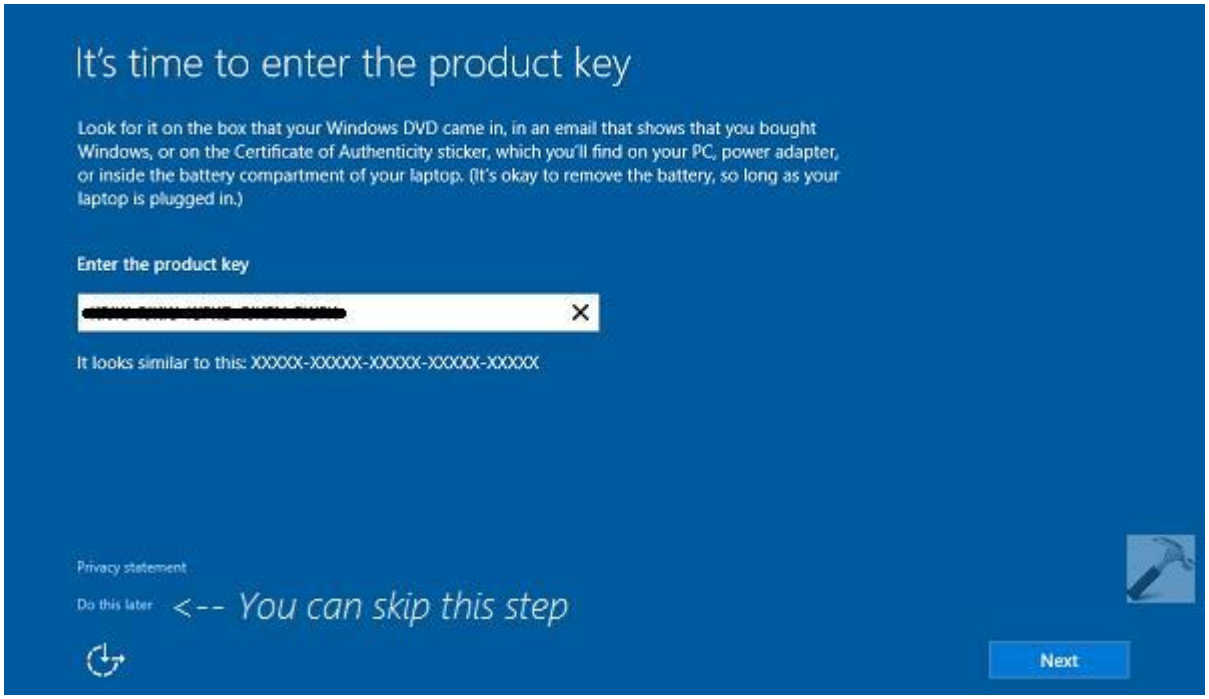

3. **Press the boot-menu key repeatedly when the laptop starts.**
4. **Common keys are F12, F9, Esc or F8. The correct key depends on the laptop brand.**
5. **Select your USB drive, preferably the UEFI USB option.**
6. **Press Enter.**

Windows Setup should appear.

4. Install Windows 10

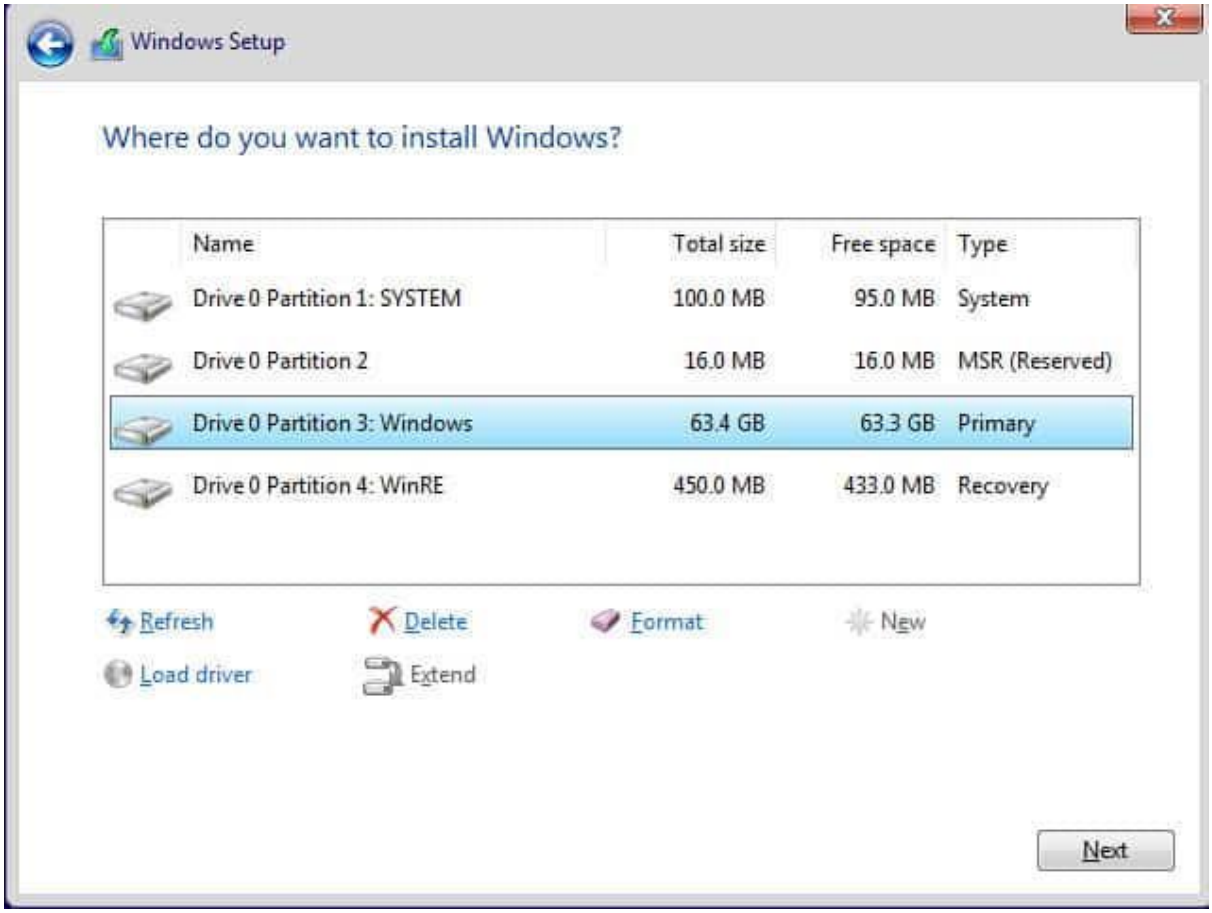

Follow these steps:

1. **Choose your language.**
2. **Choose your time and keyboard settings.**

3. **Click Next.**
4. **Click Install now.**
5. **Enter your product key if requested. If you have an existing digital licence, you can select "I don't have a product key" and install the matching edition.**
6. **Select Windows 10 Home or Pro, matching your licence.**
7. **Accept the licence agreement.**
8. **Select Custom: Install Windows only (advanced).**

5. Create partitions (important)

A partition means dividing one hard drive into separate sections.

For example:

- C Drive: Windows and programs.
- D Drive: Personal files, photos and documents.

Example partition plan for a 512 GB SSD:

Example disk arrangement

C: Windows

180 GB

D: Personal files

Remaining space

Approximate usable capacity will be lower than the advertised 512 GB. Windows also creates small system partitions automatically.

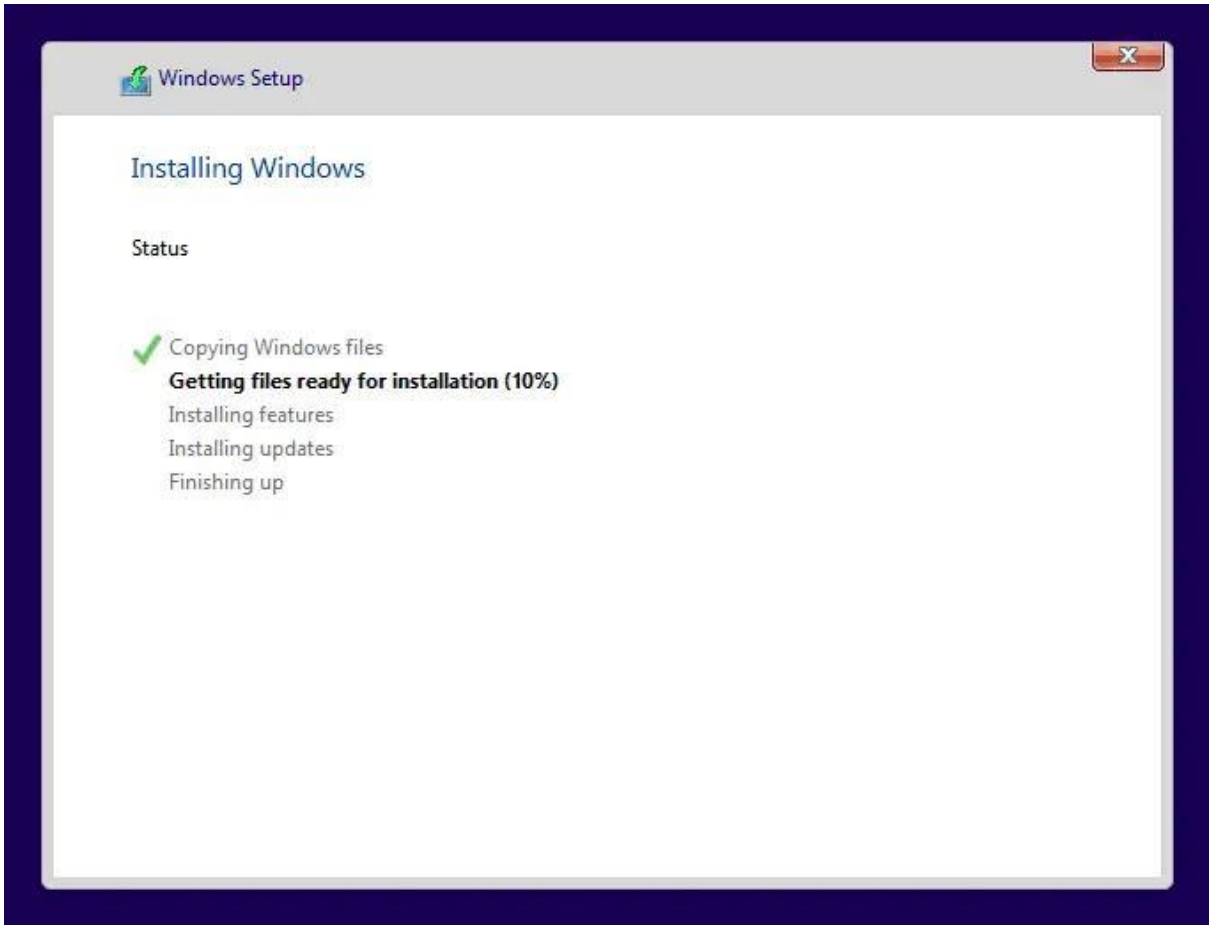

My partitioning tips:

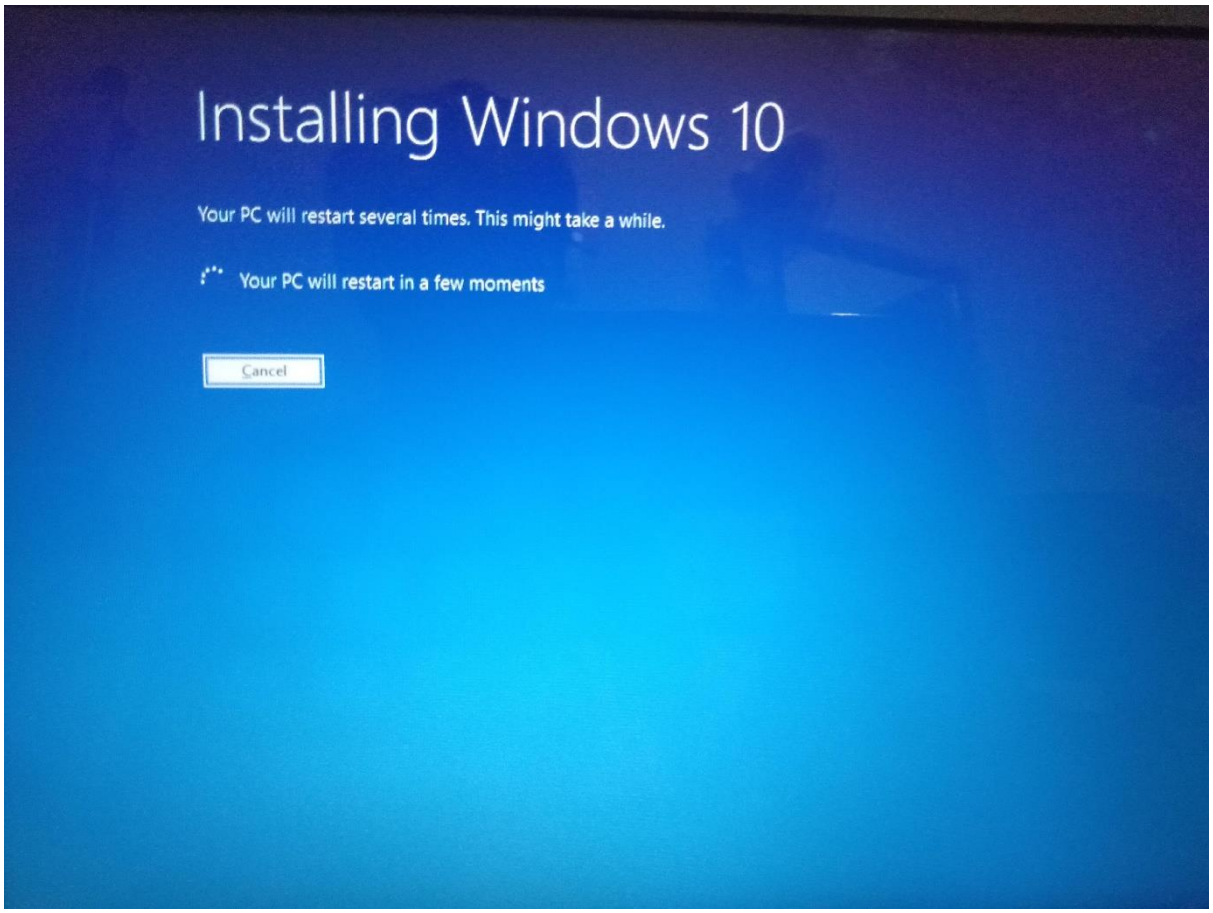

- Keep around 150–200 GB for C: on a 512 GB drive.
- Use the remaining space for D: if you want a separate file-storage drive.
- Do not delete EFI, Recovery or other system partitions unless you understand why they are there.
- If you want a completely fresh installation, Windows Setup can create the required system partitions automatically from unallocated space.
- Never delete partitions on another hard drive by mistake.

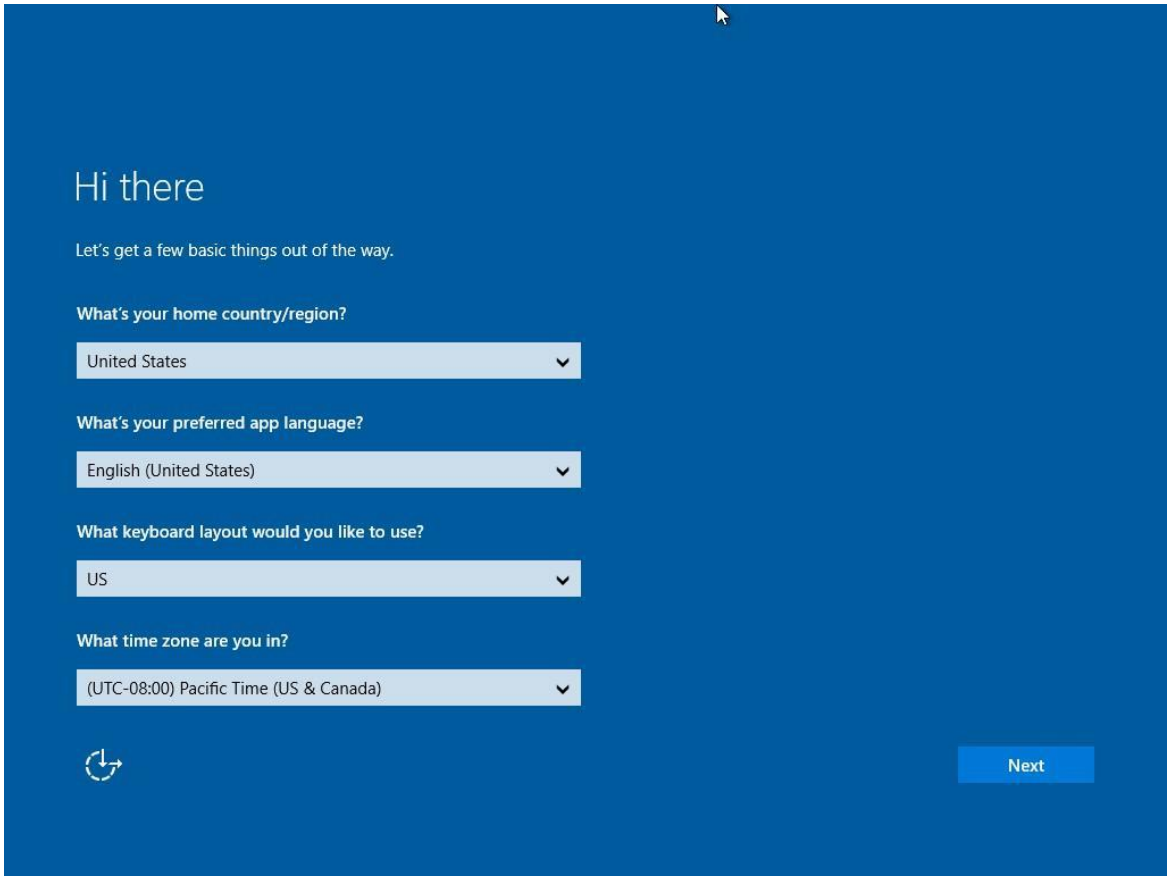

For beginners, the safest option is to select the correct target drive's unallocated space and click **Next**. You can create a D: drive later using Disk Management.

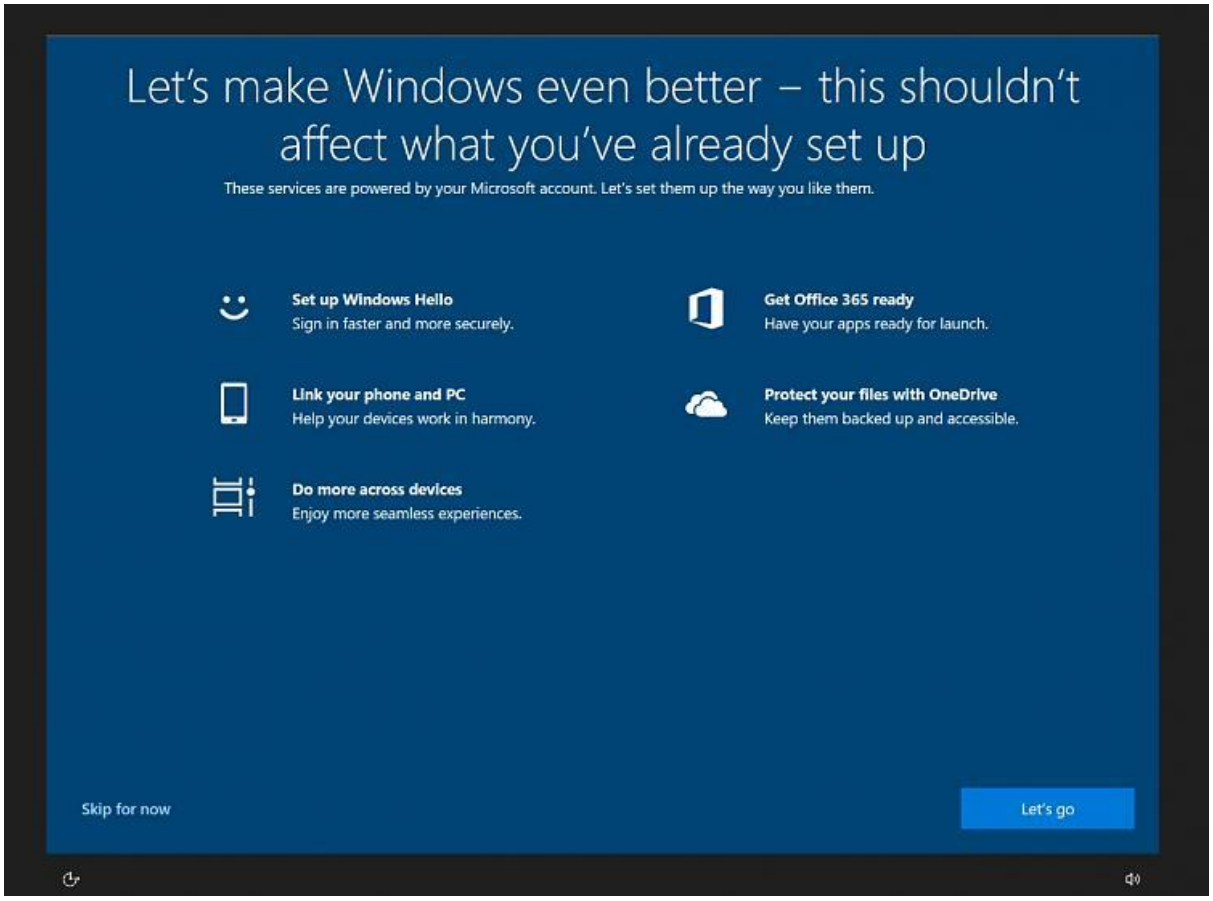

6. Complete Windows installation

1. Click Next after selecting your installation location.
2. Wait while Windows copies its files.
3. The laptop will restart several times.
4. Remove the USB when appropriate, or make sure the laptop boots from its internal drive.
5. Follow the first-time setup instructions.
6. Connect to Wi-Fi.
7. Create your user account and password.
8. Set your location and keyboard preferences.

Windows Setup

Installing updates
Finishing up

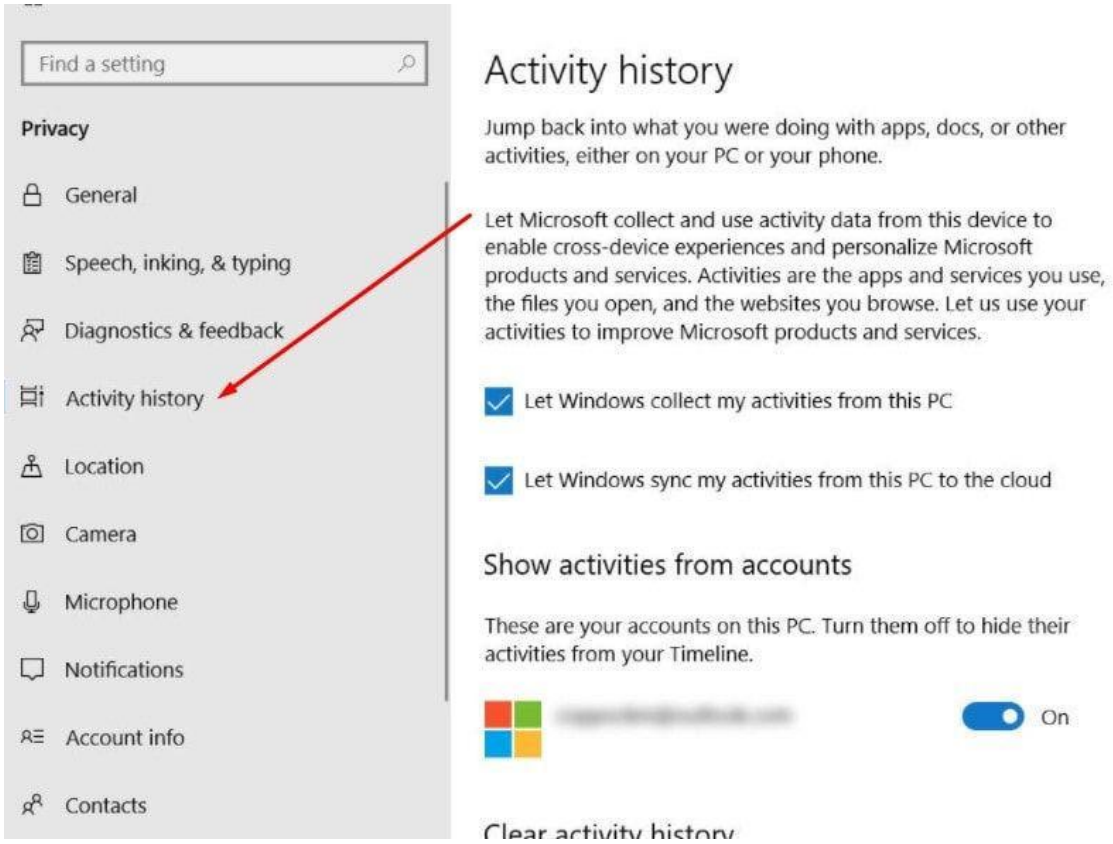

Installing Windows 10
Your PC will restart several times. This might take a while.
Your PC will restart in a few moments
Cancel

Your Windows installation is complete.

7. Change privacy settings

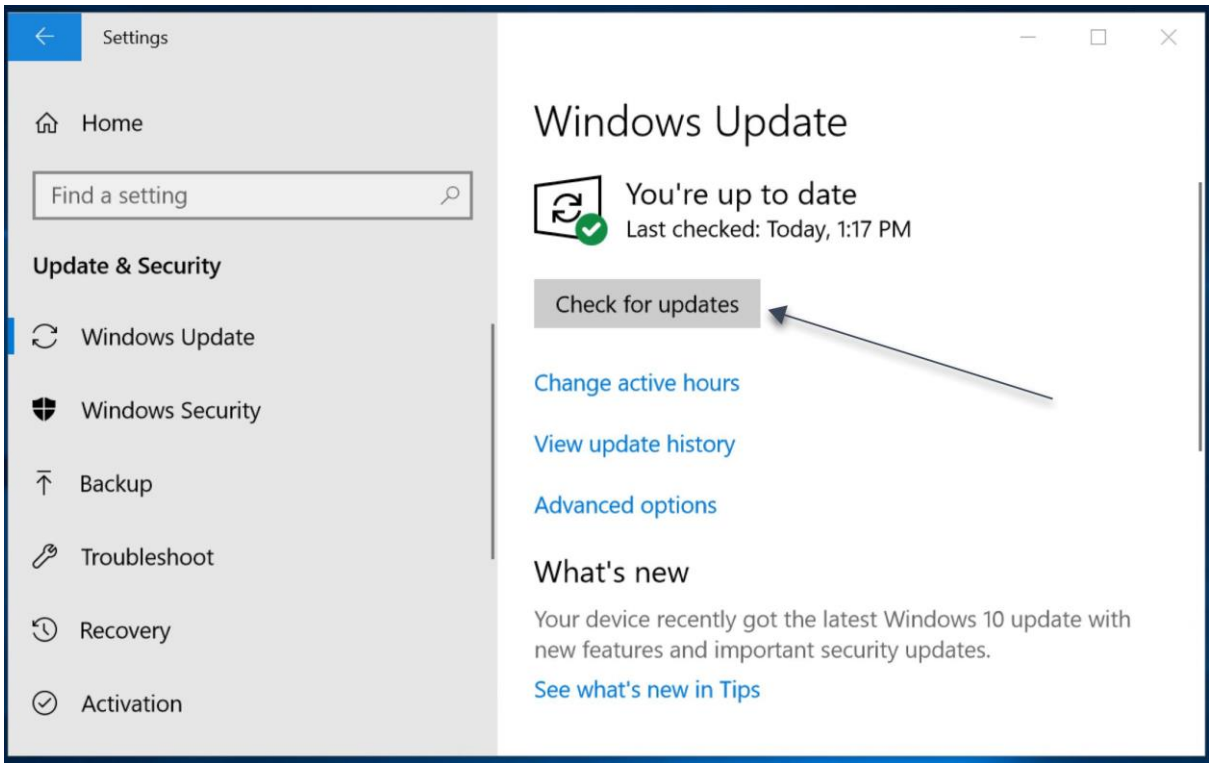

After installation, open:
Start → Settings → Privacy
Recommended settings:

Setting	**Recommendation**
Location	Turn off if not needed
Camera	Allow only trusted apps
Microphone	Allow only trusted apps
Diagnostics	Choose the least data-sharing option available
Advertising ID	Turn off
Activity history	Turn off if not needed
Background apps	Disable unnecessary apps

These settings help reduce unnecessary data sharing. Some apps may need location, camera or microphone permissions to work.

8. Windows updates and drivers

Open:

Start → Settings → Update & Security → Windows Update

- **Check for available updates.**
- **Install applicable updates.**
- **Restart your laptop if requested.**
- **Install drivers from your laptop manufacturer's official website.**
- **Check Wi-Fi, sound, graphics, touchpad and Bluetooth.**

Important: Because Windows 10 support ended in October 2025, ordinary free security updates are no longer available.

Check Microsoft's Extended Security Updates (ESU) information

9. Final checklist

-After installation, check everything:
-Installation checklist
-Windows starts without errors
-Wi-Fi and internet work
-Sound and speakers work
-Touchpad and keyboard work
-Screen resolution is correct
-C and D drives are visible (if created)
-Windows is activated
-Privacy settings are checked
-Drivers are installed
-Available security updates or ESU status checked
-Important files are backed up

10. Steps that may be unclear or missing

I can prepare and check the instructions, but I cannot physically operate your laptop or confirm that installation succeeded. During your installation, watch for these possible problems:

Step	What may be unclear
Boot menu	Different laptop brands use different keys.
Product key	Users may not know which Windows edition they own.
Partitioning	Selecting the wrong disk can erase personal files.
USB boot	Secure Boot or boot mode may cause problems.
Hard drive missing	A storage controller driver may be required.
Updates	Windows 10 no longer has normal free security support.
